OPENING REMARKS

Dr. Senthil Gopinath
Chief Executive Officer

The GlobeWatch 2025 ICCA Country and City Rankings Report stands as a testament to our industry's resilience. It reflects not only where we have been, but where we are headed.

This year's report captures more than **12,000** international and regional association meetings from across the globe, drawn from ICCA member submissions and the dedicated work of our in-house research team.

Beyond the headline rankings, you will find rich analysis by region, meeting size, subject sector, and the newest addition, venue types. Our aim is to ensure that the intelligence contained in these pages is actionable: a resource that guides our members to make smarter decisions, pursue stronger business opportunities, and build more compelling cases for government advocacy and private investment.

What makes this report possible, of course, is our community. Each member who submitted meeting data this year has contributed to something larger, helping shape a clearer, more accurate picture of our global landscape. ICCA's research team drives the process by sourcing, verifying, and refining data, ensuring all findings are credible and reliable. I extend my sincere gratitude to every individual and organisation that played a part. Your contribution is what gives this report its authority and its value.

The international association meetings sector continues to deliver impact that extends well beyond the short-term tourism spend, from scientific advancement and policy development to social legacy and cross-border collaboration. At ICCA, we are proud to stand alongside our members in supporting that mission through research, education, and advocacy.

As you explore the rankings and analysis that follow, I hope you will find not only data, but direction.

The **162** countries and territories, along with **1603** cities represented in this year's rankings reflect a global community that is engaged and ambitious.

The 2025 ICCA GlobeWatch shows where the world met last year. The choices made by every member of this community, starting today, will determine where the world meets next.

Dr. Senthil Gopinath
Chief Executive Officer, ICCA

2025 GLOBAL SNAPSHOT: INTERNATIONAL ASSOCIATION MEETINGS AT A GLANCE

The 2025 data captures over **12,438** ICCA-eligible international and regional association meetings across all continents. Europe holds the largest share, with Asia-Pacific and North America following. Latin America, Africa, and the Middle East continue to grow their presence. Together, the six regions reflect how broadly knowledge spreads when people gather in person.

Figure 1: World Map & % per region

The **U.S.A.** continued to lead the global rankings in 2025.

Japan climbed to **6th** globally, up from 8th in 2019, with progressive growth among major meeting nations. Further down the rankings, **Brazil** reached **13th** place, surpassed its pre-2020 meeting volumes, a meaningful signal of Latin America's growing global standing.

Rank	Country/Territory	Rank	Country/Territory
1	U.S.A.	11	Canada
2	Italy	12	Republic of Korea
3	Germany	13	Brazil
4	Spain	14	Australia
5	United Kingdom	14	Belgium
6	Japan	16	Austria
7	France	17	Sweden
8	Portugal	18	Poland
9	Netherlands	19	Denmark
10	China-P.R.	19	Greece

Figure 2: Worldwide Ranking – Top 20 countries

At the city level, **Lisbon, Paris, and Barcelona** lead the 2025 rankings. Vienna, Singapore, Prague, Copenhagen, London, Seoul, and Tokyo round out the top 10.

Rank	City	Rank	City
1	Lisbon	11	Bangkok
2	Paris	12	Berlin
3	Barcelona	13	Madrid
4	Vienna	14	Brussels
5	Singapore	15	Hong Kong
6	Prague	16	Rome
7	Copenhagen	17	Athens
8	London	18	Dublin
9	Seoul	18	Istanbul
10	Tokyo	20	Amsterdam
		20	Buenos Aires

WHAT THE WORLD IS MEETING ABOUT

Medical Sciences, Technology, and Science remain the leading knowledge sectors, with Education, Industry, Social Sciences, Management, and Economics following.

The breadth of subject representation, from Architecture and Historical Sciences to Ecology and Safety, reflects the cross-disciplinary reach of international association meetings.

Safety & Security (208 meetings in 2025) and **Library & Information** (168 meetings in 2025) rebounded strongly despite their smaller base. Each grew nearly 3.9 times from their 2021 lows, ahead of larger sectors such as Industry (3.5 times) and Economics (3.6 times). Both sectors point to growing institutional focus on information governance and risk management.

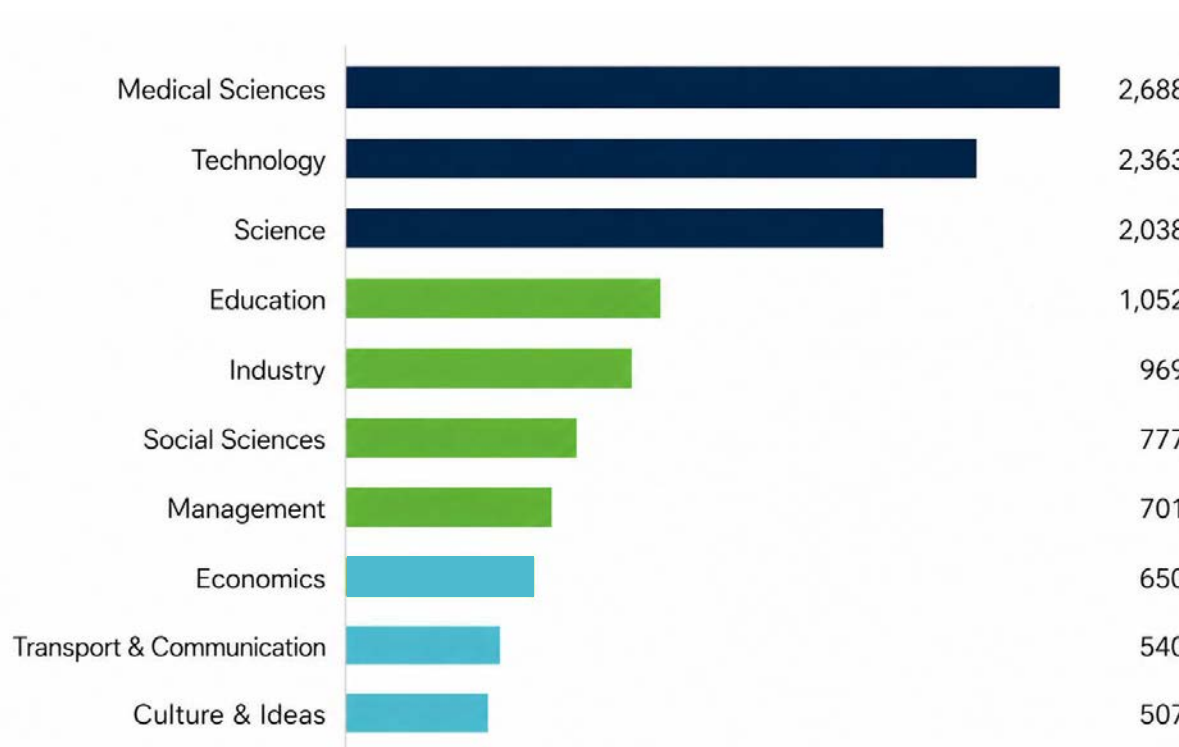

Figure 4: Worldwide ranking - Top 10 subject sectors

THE MEETING SIZE SPECTRUM

In 2025, nine out of ten international and regional association meetings welcomed fewer than 1,000 participants. Yet the resilience story belongs to the largest congresses. Meetings of 1,000 participants or more have returned to or exceeded their 2019 levels, with the largest congresses, those above 3,000, back exactly where they were. Mega conventions proved the most durable format of all.

Across every size category, these meetings are delivering knowledge exchange and sector connections that no other format replicates.

Figure 5: How Meeting Sizes Have Recovered After 2020

The 2025 ICCA Rankings show where meetings occur and why some destinations pull ahead. Each data point highlights strategies and investments that every destination, venue, meeting management agency, and association can learn from.

ICCA BIPro

3 New Solutions. 1 Outcome:

WIN MORE BUSINESS

SUCCESS IN DIFFERENT WAYS

NO SINGLE TIER TELLS THE WHOLE STORY

Share of meetings by size tier, 2025

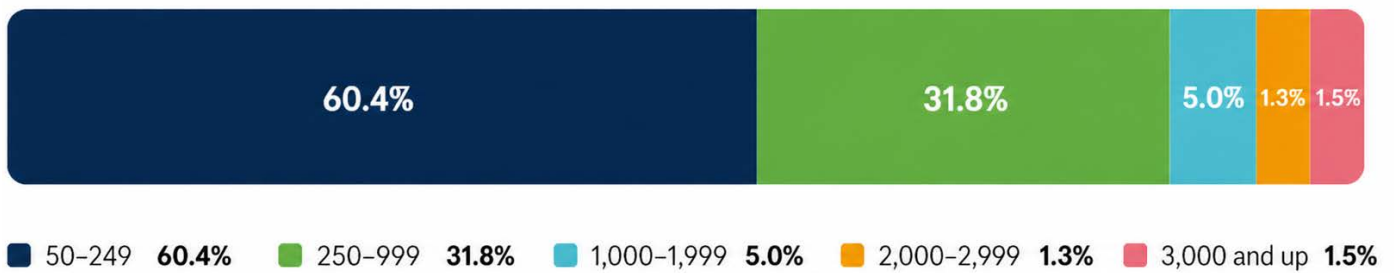

Figure 6: Share of meetings by size

Meetings with 50 to 249 participants represent the largest share of total meeting volume, at 60.4% in 2025. The 250 to 999 range follows at 31.8%. Together, these two categories account for most international and regional association meetings worldwide.

Meetings with 2,000 or more participants generate significant economic returns, yet they account for just 2.8% of all meetings recorded. The value of a destination's meeting portfolio comes from building a consistent pipeline across all sizes, not just large congresses.

Since 2016, meeting sizes have remained stable, with smaller meetings more frequent. Annual meetings account for 63.1% of recorded events, making them the most common rotation cycle by far. Larger congresses run on longer cycles, so they are less frequent and take longer to secure.

From The ICCA Research Desk

Medical Sciences: A Sector for Every Size

Medical Sciences stands apart from every other major subject sector in how its meetings are distributed across size categories. While Technology, Science, and Education each place 65% or more of their meetings in the smallest tier, nearly half of medical sciences meetings fall in the 250 to 999 range, and 35% involve 1,000 or more participants, more than ten times the large-meeting share of Technology or Science. The pattern reflects the breadth of medical knowledge exchange.

Every Meeting Size Has Opportunity

According to the 2025 data, the 250 to 999 category stands out as the sweet spot — accessible for a wide range of destinations, yet delivering USD 1.3 million in average estimated delegate spend per meeting. Smaller meetings in the 50-499 range anchor pipeline consistency through volume and frequency. Large congresses of 1,000 or more generate almost 52% of total estimated spending from just 8% of meetings, but winning them requires more complex coordination, longer lead times, and sustained pipeline development.

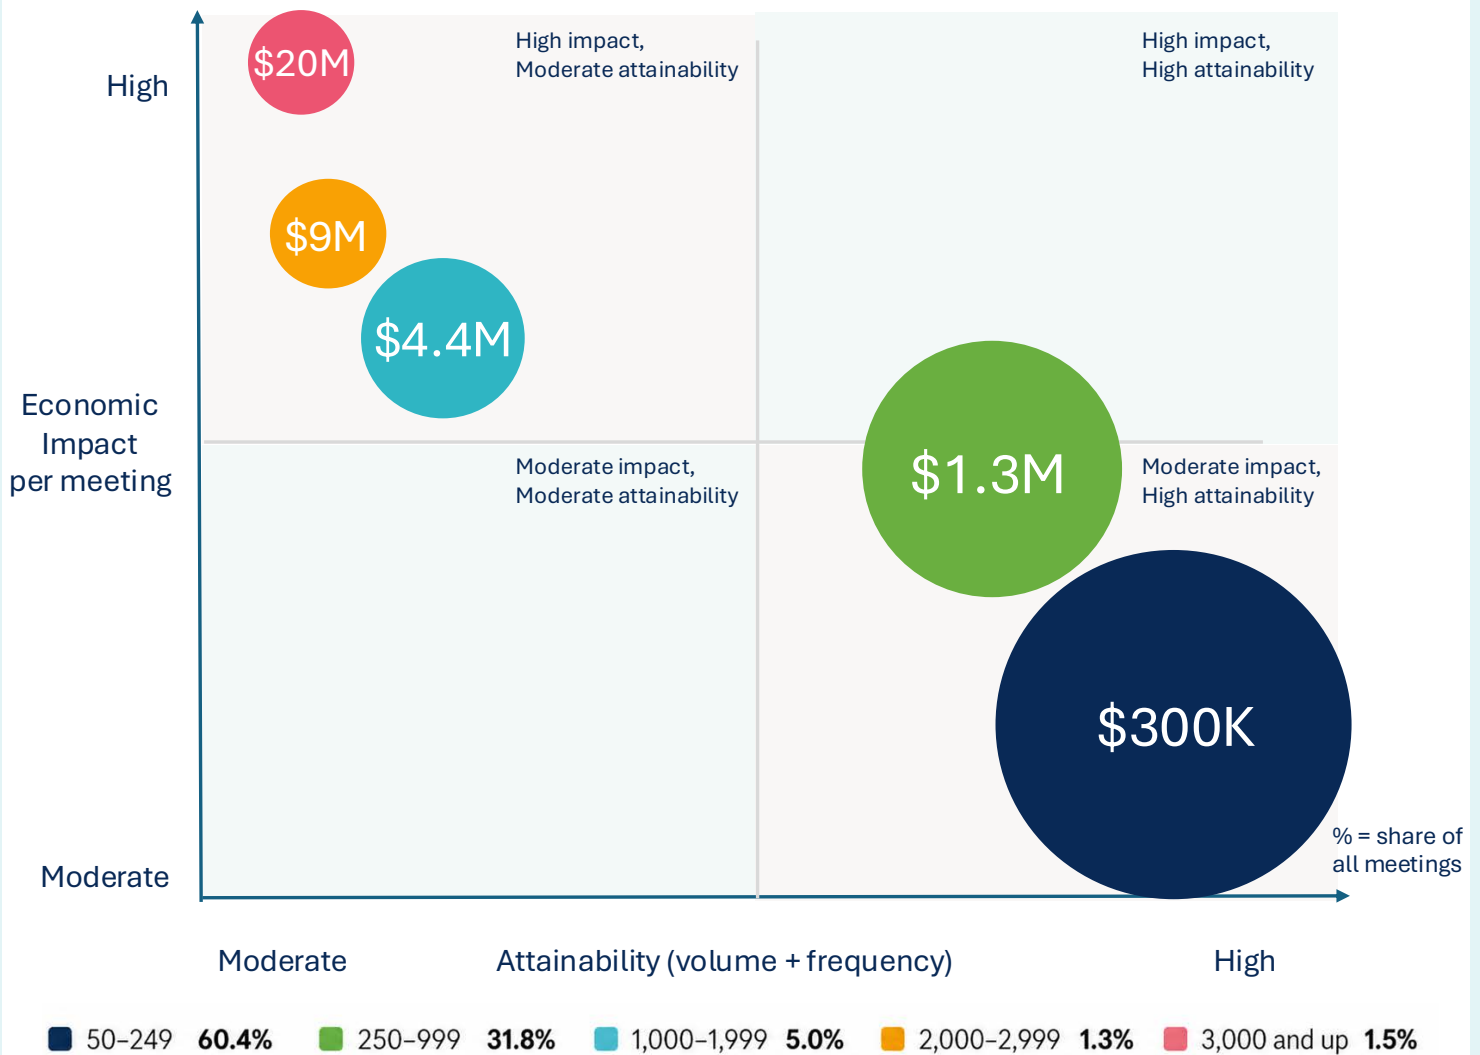

Figure 7: The Meeting Size Opportunity Map

WHAT THE DATA TELL US

International and regional association meetings are not just city-wide conventions.

The 92% of meetings with fewer than 1,000 participants account for 66% of the estimated total delegate spending. The 500 to 999 tier offers the best attainability and return. The most consistent performers, such as Vienna and Lisbon, are built on broad pipelines across all sizes.

A consistent pipeline builds more durable long-term performance than large congresses alone.

EVERY SECTOR HAS ITS CHAMPION

Medical Sciences, Technology, and Sciences are ICCA's top three subject rankings again in 2025. Within those categories, country and city-level patterns tell a more specific story.

At the country level, **Japan** does not rank among the top five by meeting volume, but it is influential in the technology sector: Tokyo, Osaka and Yokohama combined host significant portions of the technology association meetings. **Spain** is strong in medical sciences, with Barcelona and Madrid among the highest globally. **Italy** spreads across sectors, and **Germany** anchors heavily in the medical sciences, with secondary strengths elsewhere.

Many cities are building sector depth beyond the overall volume rankings. **Dublin** ranks in the top ten globally for both medical sciences and science meetings, a breadth that reflects Ireland's research and life sciences base. **Taipei** performs consistently across all three leading sectors, appearing in the top 15 for medical sciences, science, and technology. **Montreal** ranks sixth globally in technology meetings, confirming its position as a leading hub. **Porto**'s ranking of ninth in science meetings is one of 2025's more notable city-level findings, given its overall meeting volume. **Athens** and **Istanbul**, while outside the top ten overall, each hold positions in the top 20 of the medical sciences, a signal of emerging destination strength in a high-value sector.

Medical Sciences		Sciences		Technology	
Rank	Country/ Territory	Rank	Country/ Territory	Rank	Country/ Territory
1	U.S.A.	1	U.S.A.	1	U.S.A.

Figure 9: Worldwide ranking - Top 10 Cities by Subjects

WHAT THE DATA TELL US

A sector-driven strategy is a proven way to win bids for international and regional association meetings. Which sectors your destination wins in matters as much as the number of meetings you host overall. The most effective destinations build sector strength deliberately, by aligning with their existing research institutions, industry clusters, and academic networks. For many destinations, it is the strategy.

From The ICCA Research Desk

What Conferences Knew Before the Market Did

Association meetings related to artificial intelligence have grown steadily over the past decade, reaching their highest recorded level in 2024 with 79 meetings, and holding at 76 in 2025. Many emerging topics peak in academic circles before commercial adoption takes over. AI has not followed that pattern. The research community and the market are moving together.

For countries and cities, the implication is practical: tracking which subject areas are attracting academic meetings today is a form of early intelligence about where industries might shift tomorrow. The meetings happening now in areas such as quantum computing, synthetic biology, and climate engineering may be early indicators of sectors that will become the economic priorities of the next decade.

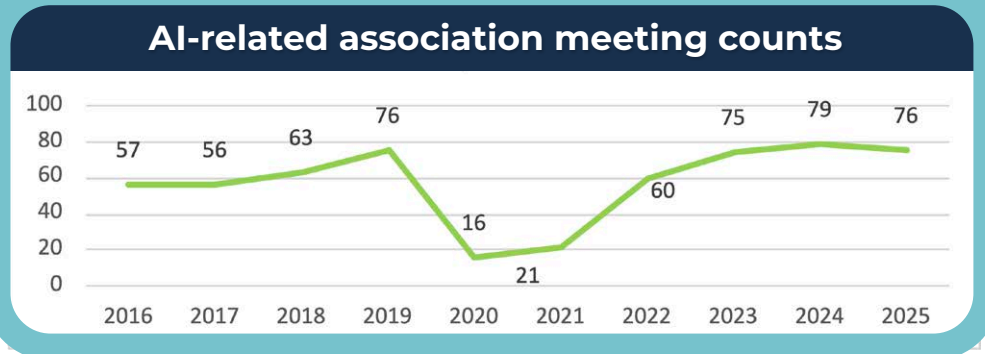

Figure 10: AI related association meeting counts from 2016 to 2025

From The ICCA Research Desk

Safety & Security Outpaces the Field

With 208 meetings recorded in 2025, Safety & Security is a relatively small sector in the ICCA subject rankings, although its recovery stands out. Since the 2021 low, the sector has grown nearly four times, outpacing larger sectors such as Industry (3.5 times) and Economics (3.6 times). For a sector of its size, that pace of recovery signals growing institutional demand for international gatherings on risk and resilience.

Meetings classified under Computer Science and Security have grown from 18 in 2021 to 71 in 2025, nearly quadrupling over the same period. Categorised separately, this growth reflects the same underlying trend: a global economy increasingly preoccupied with digital security and governance is generating more international association activity.

From The ICCA Research Desk

Italy: Sector-Driven By Design

In 2025, Italy ranks among the top two in the world for Science meetings, fourth for Medical Science, and third for Technology. These results span multiple cities and multiple years. They reflect a system that performs consistently across disciplines and destinations.

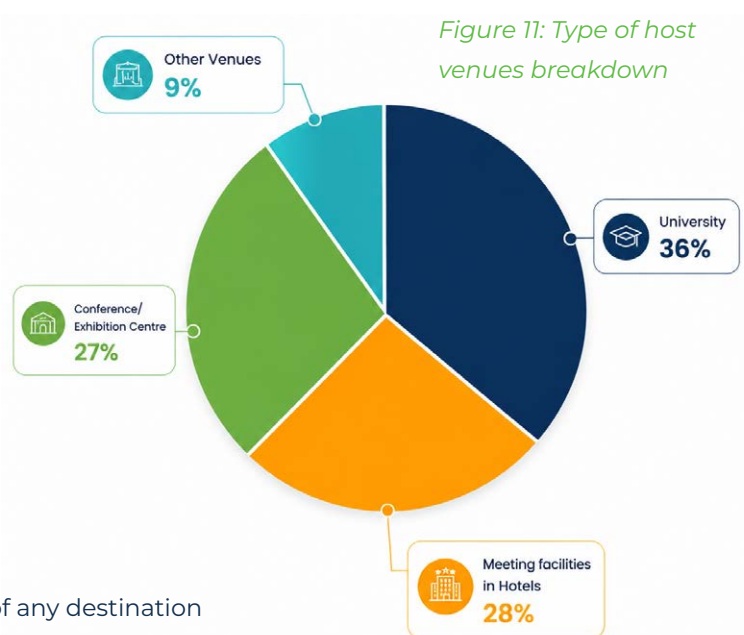

That breadth is by design.

Convention Bureau Italia's Italian Knowledge Leaders programme, launched in 2021 and explicitly recognised by ICCA as a model of good practice, identifies Italian professors, scientists, and clinicians who hold leadership positions in international associations and supports them in actively bidding to bring those associations' congresses to Italy. The programme operates simultaneously across cities and sectors, which helps explain why Italy's performance is distributed across the country.

THE VENUE AS A CITY STRATEGY

International and regional association meetings draw on a range of venue types to host their gatherings. Universities, hotels, and convention and exhibition facilities all play active roles.

ICCA venue data is available for approximately 40% of 2025 meetings, and the sample is significant enough to reveal patterns in how associations make those choices.

The Anchor of the Destination

Convention and exhibition centres remain the anchor of any destination serious about international meetings. They are the infrastructure through which a city demonstrates its capability and commitment.

Convention and exhibition centres bring more than capacity. Their business development infrastructure is what drives long-term bid success. Many centres maintain relationships with international association decision-makers that predate, and often outlast, changes at the city's promotional bureau. Many operate their city's ambassador programme directly, connecting local academic and professional champions with international bid opportunities and guiding those bids through years of cultivation. When a destination wins a major international congress, a convention and exhibition centre team has frequently been working on that relationship behind the scenes for years.

Convention centres understand what international association meetings mean for their cities, connecting meetings to long-term growth, economic development, and competitiveness. This is cathedral thinking in practice: investing today in relationships, infrastructure, and reputation that will shape a city's trajectory for decades.

Cities like Barcelona, Dubai, Seoul, and Vancouver have made generational investments in their convention facilities because the returns are proven. Purpose-built venues attract more meetings, longer delegate stays, and greater economic returns across all sectors in the city. A convention centre is among a city's most productive long-term assets.

Governments are increasingly sharing this understanding, as public-private investment in convention infrastructure is accelerating worldwide. Stimulus programmes in Saudi Arabia, India, China, and the United States have allocated billions of dollars for next-generation convention centres.

A convention centre is among a city's most **productive long-term assets.**

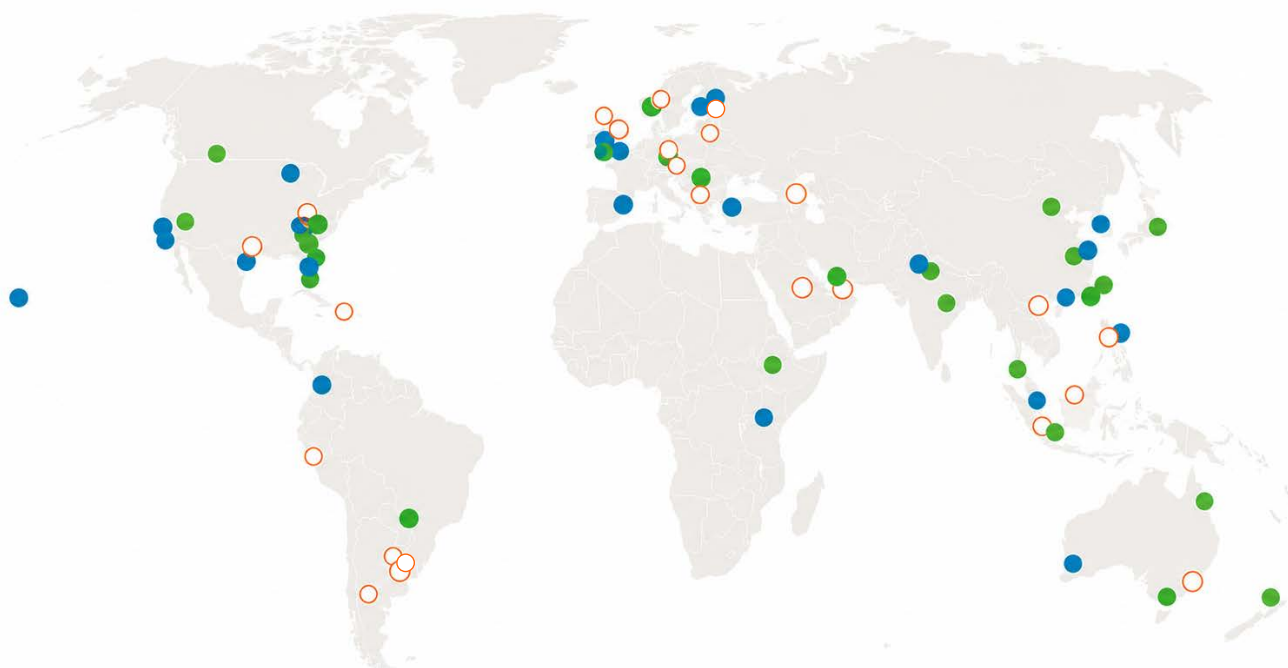

The map below captures the scale of what is underway. Across 78 tracked projects, spanning 36 countries and every inhabited continent, the world is simultaneously renovating, expanding, and building — investing in the physical infrastructure that will host the knowledge exchanges, scientific discoveries, and professional gatherings of the next generation. This is cathedral thinking made visible. The venues being built and reimagined today will shape how the world meets for decades to come."

Building for the Future

Figure 12: Global Convention Centre Infrastructure Projects Tracking

● Recently opened / renovated (2024–2026) ● Under construction ○ Future / approved

*This map presents a selection of major convention centre infrastructure projects as tracked by ICCA Research Desk as of April 2026. Projects are categorised by development status: recently opened or renovated (2024 to 2026), currently under construction, and approved for future development. Investment figures are sourced from public announcements and industry reports; some figures are estimates or subject to revision. For full project details, regional breakdowns, and data enquiries, please contact ICCA's regional directors.

The most competitive facilities are defined by far more than square footage.

- **FLEXIBILITY** now defines venue design: modular walls, column-free halls, and spaces that shift between large plenary formats and intimate breakout configurations without disrupting the programme. Fira de Barcelona's Hall Zero exemplifies this thinking. The new structure features a massive column-free upper level with a ceiling height of 20 metres, large enough to fit an entire city block, yet designed to flex across exhibitions, congresses, and executive meetings within the same footprint.
- **SUSTAINABILITY** has become a competitive differentiator. For example, the Melbourne Convention and Exhibition Centre is the world's first convention centre to achieve a 6-Star Green Star Environmental Rating, The Costa Rica Convention Centre's Carbon Clear by Heroica framework, and the Vancouver Convention Centre's double LEED Platinum certifications are proven cases that investing in sustainability means business growth.
- **TECHNOLOGY** integration is reshaping the delegate experience from arrival to departure, with smart infrastructure, hybrid-ready programming, and AI-assisted operations becoming baseline expectations. The GCB German Convention Bureau and Fraunhofer IAO's Future Meeting Space research has identified AI, automation, and demographic change as the defining forces reshaping how venues must think and operate.

The Campus Advantage

Universities play a significant and often overlooked role. Cities such as Edinburgh, Leiden, Leuven, Lyon, and Cambridge draw meetings thanks to their universities' research strengths. A strong medical faculty attracts health conferences. Leading engineering schools attract professional societies. This creates a knowledge cluster effect. A city's competitive meeting advantage is often built on academic reputation.

Universities are also a major source of conference ambassadors. ICCA data shows 59% of ambassador programme participants come from universities. The downstream effect is significant. Ireland's programme has generated EUR 2.9 billion in bids since 2009.

For convention bureaus, engaging universities as strategic partners by including them in reporting and bid pipelines is an effective way to grow meeting activity and total economic impact.

A Different Kind of Group Business

Meeting facilities in hotels are also a popular choice of venue for international associations. Most international association meetings fall in the under 1,000 participant range, a size that fits comfortably within the infrastructure many hotels already have.

A property that has invested in quality meeting facilities and positioned itself primarily for corporate events, incentives, or social functions may be missing a substantial, recurring revenue stream. International association meetings are multi-line events, bringing room rental, room nights across multiple days, structured food and beverage, and ancillary delegate spend all tied to a single event.

Association meeting planners tend to work within established networks of trust, returning to venues and cities that have earned their confidence. Win the confidence of an association's meeting organiser, and that relationship will pay off in the long term. They refer, return, and recommend. The business that follows a well-executed association meeting is often invisible in the original booking.

Hotels that position themselves and work closely with their local CVB can win business already attracted to the city and waiting to be won.

WHAT THE DATA TELLS US

Convention and exhibition centres are the strategic anchor of the international association meetings market for any destination. The generational infrastructure investments underway across continents reflect a growing policy consensus: convention centres are economic development instruments.

The venue picture extends well beyond the convention centre. Universities and hotel facilities play active roles in hosting international association meetings. Cities that treat universities as strategic partners stand to grow. Hotels, meanwhile, are well positioned to capture the mid-size association alone.

From The ICCA Research Desk

Dubai: Convention Infrastructure as City Strategy

Two decades ago, Dubai ranked 44th globally in ICCA's city rankings. In 2025, it had risen to 24th place worldwide.

In 2024 and 2025, Dubai ranks first globally for average attendance per association meeting and leads the Middle East and Africa in the number of association meetings hosted, with Dubai World Trade Centre alone welcoming nearly 3 million participants across 401 events, a 12% year-on-year increase.

Dubai's government has strategically integrated business events into its broader economic diversification plans, acknowledging that conferences and exhibitions generate value far beyond the hospitality sector. This vision is clearly set out in the Dubai Economic Agenda D33, which directly connects investment in convention infrastructure with the emirate's goal of becoming one of the world's top three business hubs. The completion of Phase 1 of the Dubai Exhibition Centre expansion in 2025 has already enhanced the city's ability to host major international events, with upcoming phases expected to further accelerate this progress.

At the same time, Expo City Dubai, originally developed as the site of Expo 2020 Dubai, is evolving into a permanent, integrated urban district anchored in business events, innovation, and knowledge exchange, signalling a long-term structural commitment.

The Dubai story ultimately illustrates what can be achieved when a convention centre is treated as a long-term instrument of city transformation. The vision and the venue came first; the knowledge economy, international standing, and wider business ecosystem followed.

WHY INTERNATIONAL ASSOCIATION MEETINGS MATTER?

International and regional association meetings shape how a destination positions itself in the global knowledge economy and what sectors it becomes known for. They transform destinations from places people visit into places where the world comes to think, decide, and collaborate.

That is what makes them different. They are mission-driven and global in reach. They rotate, returning to a destination when it has earned their trust. And the communities they create outlast the event by years, sometimes decades.

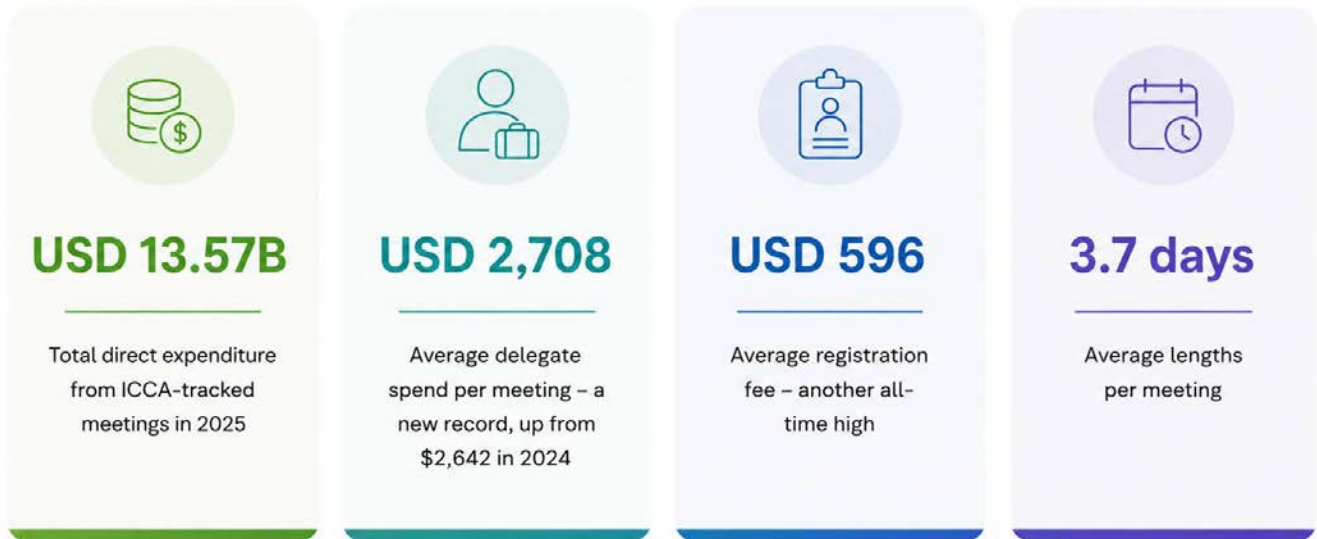

The three sections that follow make the case: for the depth of value these meetings generate, for the role they play in defining global cities, and for the generational talent and knowledge ecosystems they help cultivate.

AN ECONOMIC & SOCIETY ADVANCEMENT ENGINE

International association meetings consistently deliver among the highest economic returns of any visitor category.

2025

The Premium Visitor Argument

When local stakeholders are asked why their city should invest in attracting international association meetings, the spending data is unambiguous. According to VisitBritain's 2025 Business Events Delegate Survey, business event delegates do not behave like leisure tourists. They spend more per night, stay in peak-use accommodation, dine at local restaurants, use local conference services, and fill flights during off-peak periods, smoothing the seasonal volatility that affects leisure-dependent destinations.

Figure 13: Average spend per trip by different business event types (VisitBritain, 2024)

International delegates outspend their United Kingdom domestic counterparts by a ratio of 4:1, driven by longer stays, higher registration fees, and a greater propensity to extend trips. Non-European visitors to the UK average £1,824 per trip; European visitors £872; domestic attendees £328. And when a delegate extends their stay for leisure, their total spend more than doubles: from an average of £714 to £1,760. (VisitBritain, 2025.)

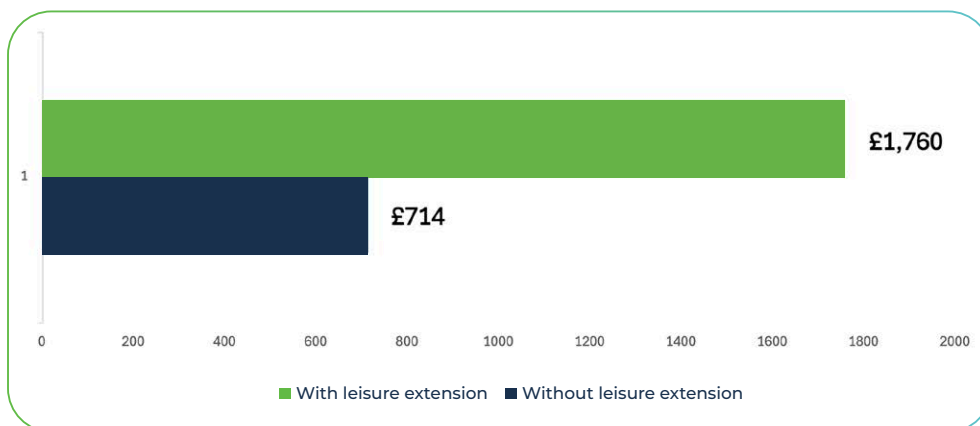

Figure 13.1 Trip Extension Multiplier

The UK government put it plainly at the 2024 Tourism Policy Conference: *“Business event visitors spend more than twice as much per night as leisure tourists.”*

Today’s Delegate is Tomorrow’s Investor and Leisure Visitor

of business event delegates say they “definitely” plan to return to the city or region for **leisure**.

of business event delegates say they will “definitely” return to **invest** or grow **business relationships**.

An international association congress extends well beyond the final session. For most delegates, it is their first visit to a destination, and research consistently shows that the majority intend to return. They carry the destination's name back through their professional networks. They recommend it to colleagues who select venues for regional meetings, and corporate retreats. One well-hosted congress can generate a pipeline of follow-on meeting activity worth 10 times its original value over the next 5 to 10 years.

This is simultaneously a tourism story and an economic development story, and it is why forward-thinking destinations treat every bid as a long-term investment.

Making the Case: The 10th World Congress of the International Academy of Oral Oncology (IAOO)

The economic case for international association meetings is often made in general terms, such as delegates' spending and hotel nights.

The IAOO World Congress in Liverpool offers a clear example.

Layer One: Direct Economic Impact

The direct economic impact flowed immediately and visibly through ACC Liverpool, the city's hotels, restaurants, and transport network.

Estimated Hotel Room Nights:

~770 international delegates × 3.5 nights	~2,695 nights
~430 UK delegates × 1.5 nights	~645 nights
Estimated total	~3,300 nights
At avg. Liverpool hotel rate ~£140/night	~£462,000

Estimated Total Delegate Spend:

~500 non-European international delegates × £1,824	~£912,000
~270 European delegates × £872	~£235,000
~430 UK delegates × £328	~£141,000
Estimated direct spend	~£1.29M

Regional multiplier ×1.45 (Liverpool city region — lower than the UK national average of ×1.80, which reflects London's denser supply chain)

~£1.87M

* Estimates based on VisitBritain 2024 benchmarks and ICCA delegate spend methodology.

In addition to accommodation and tourism spending, the congress created opportunities for local business event suppliers and service providers. ACC Liverpool, a carbon-neutral venue with zero waste to landfill, managed the entire event infrastructure and worked directly with local vendors throughout the event.

Layer Two: Beyond Tourism

Liverpool has some of the highest oral cancer rates in England. The IAEO Congress brought global experts on the disease to the city, directly addressing a local health crisis. The event featured hundreds of presentations on prevention and care, including research from the **University of Liverpool** shared with a worldwide audience.

For local students and early-career researchers, the congress was an encounter with the global frontier of their field. The University of Liverpool's Head and Neck Centre was the academic driving force behind the congress bid. This is the Expose and Connect stages of the talent lifecycle, delivered by a congress that came to them.

A post-congress surplus generated by the event is being reinvested by IAEO directly into **scholarships** and **training** for future participants. The financial legacy of the Liverpool congress will outlast the event itself.

Layer Three: Legacy and Lasting Impact

Liverpool City Council went further.

Following the congress, the Council formally committed to a lasting legacy project to tackle oral cancer across the Liverpool City Region. The Congress had made oral cancer visible, and the city responded with a public health commitment.

“ The International Academy of Oral Oncology conference has shone a spotlight on the issue, and helped to remind people of the support that is on offer to help them quit smoking and reduce alcohol consumption. ”

Liverpool City Council spokesperson, July 2025

A city bid for a rotating biennial congress. The Congress came. It filled hotels, paid suppliers, and generated an estimated **£1.9 million** in economic activity for the **Liverpool** city region. It put the University of Liverpool's researchers in front of a global audience. It left behind a public health commitment that will shape Liverpool's approach to **cancer prevention**.

One international association meeting helped achieve all of this.

For policymakers focused on trade and investment, international association meetings can be part of how a destination's investment ecosystem is built and communicated to the world.

“ When ministries align with bureaus, and universities unite with industry, international association meetings transform from routine events into engines that drive the growth of cities and nations. ”

GLOBAL EVENTS MAKE GLOBAL CITIES

For many years, the meetings industry has understood that its value does not end when a congress, conference, trade show, or incentive group finalises. The direct tourism impact of international meetings is clear and measurable in hotel nights, visitor spending, jobs created, and local economic activity. Yet in practice, many cities still address international meetings as a peripheral, one-time tourism asset rather than as a strategic instrument of economic development and internationalisation. This is precisely where ICCA's Global Events Make Global Cities framework comes from.

The Context

The framework emerged from an increasingly urgent reality. Traditional destination promotional bureaus have had to operate in a more uncertain and politically disrupted environment. Many local meetings and events teams, especially in emerging regions, have gone through structural changes, leadership shifts, or reduced institutional continuity. In parallel, cities themselves have become more active players on the global stage through renewed city diplomacy, competing more aggressively for capital, investment, talent, ideas, sector influence, and international cooperation.

In this context, city officials are approaching meetings and events more strategically, transitioning from asking why to invest in meetings to how to invest in ways that advance broader city goals.

The Framework

Through ICCA's direct work with city officials, destination organisations, and ecosystem partners, it became clear that the sector needed a stronger operating framework, one that moves meetings beyond a short-term demand model and places them within the broader machinery of city competitiveness. The central thesis is to consolidate global events as strategic instruments of city internationalisation.

Historically, cities have justified event attraction through short-term results. Delegate spending, hotel occupancy, and GDP contribution are visible, immediate, and easier to measure. They also respond to the practical need public officials have to demonstrate results within limited political cycles.

International and regional association meetings do much more than generate visitor expenditure. They function as high-impact knowledge clusters. For a limited period, they bring together scientists, business leaders, policymakers, researchers, entrepreneurs, and investors in one place, creating unique environments for exchange, visibility, trust-building, and fostering new connections. In many cases, they help position a city within a global sector network more effectively than traditional destination promotion alone.

ICCA FRAMEWORK: WHY INVEST IN MEETINGS & EVENTS

Figure 14: Framework Diagram

The Strategic Shift

Instead of treating global events as isolated wins, cities can use them as long-term tools to strengthen priority sectors, support innovation ecosystems, attract foreign direct investment, build international partnerships, and enhance their global profile.

In Practice

Some cities are already applying this logic, through deliberate design or gradual alignment with broader city goals. Vienna is an example of intentional alignment. The city's approach to international and regional meetings is formally anchored in its Visitor Economy Strategy, which explicitly treats legacy creation as a core objective. The Vienna Convention Bureau acts as a strategic partner to associations, facilitating connections with local health, research, and civic stakeholders, and co-designing the community impact of events long before delegates arrive. The ERS Congress 2024, which brought over 20,000 respiratory professionals to the city, illustrates this well. Vienna and the European Respiratory Society went beyond the scientific programme, co-creating a public health campaign reaching schools, communities, and citizens across the city, turning a global congress into a local health legacy.

Colombia offers an equally instructive model, one that emerged from a national development strategy. ProColombia, the national agency responsible for investment, exports, and tourism, embeds business events directly within its economic mandate. The agency positioned meetings as drivers of territorial development, sectoral positioning, and talent attraction. Working with a national network of convention bureaus across eleven cities, ProColombia extended the country's event proposition beyond Bogotá, Cartagena, and Medellín to include emerging destinations with distinct industry clusters and innovation ecosystems.

Why It Matters

For the meetings and events industry, this changes the conversation. It builds a stronger case at the highest levels of decision-making, helping to explain meetings as platforms for competitiveness, knowledge transfer, and city-building, not just tourism contributors.

When cities invest in global events with strategic intent, they leverage these instruments to become more connected to global networks, more competitive for capital and talent, and more influential in the sectors that matter most to them.

THE WORLD'S BEST MINDS MEET

International and regional association meetings have always served a professional development function. Researchers present their work and practitioners learn from peers in other countries. Young investigators gain access to mentors and networks that their home city cannot provide.

What has changed is the context in which all of this happens and its strategic significance for destinations. The global competition for research talent is intensifying. Universities and innovation hubs across all regions are racing to attract and retain the scientists and engineers who will determine their competitiveness in the next generation.

Trends and Barriers in Global Talent Mobility

Figure 15: Ipsos/CERC Global Survey, 2025, willingness to consider international relocation for work

Willingness to consider international relocation for work has risen, yet the actual movement of talent is declining. Cross-border movement of highly skilled professionals fell 8.5% year-on-year as of mid-2025, roughly 220,000 fewer people on the move globally. The gap is widest for talent from Asia Pacific and Africa, who face the highest visa-related hurdles despite representing the fastest-growing share of global research output.

High skilled talents cite visa complexity, geopolitical uncertainty, and changing personal priorities as the primary obstacles. The forward-thinking destinations are not waiting for talent to arrive - they are creating the conditions that make talent come.

International and regional association meetings are the talent strategy. When talent cannot or will not move easily, meetings bring the world to your city instead. The professionals who walk through your doors for four days are the same people your city is trying to attract. The meeting is the audition for your destination as much as for them.

8.5% year-on-year **decline** in cross-border movement of highly skilled professionals as of mid-2025, the first sustained contraction since the pandemic.

How Meetings Shape the Talent Lifecycle

International and regional association meetings create value at every stage of a career.

Stage 1: Expose

For someone at the beginning of their career, a doctoral student, a young investigator, an engineer fresh off the university, an international and regional association meeting is an encounter with possibility. It is the first time they see, in one room, what their field actually looks like at the global level: who the leaders are, what the frontier problems are, what a career in this discipline can become.

Association meetings have always provided this. What international gatherings do is amplify it beyond measure. When the congress draws attendees from forty countries, the students encounter different cultures, systems, and research traditions. No classroom, journal, or national conference offers that breadth.

For destinations, this is the moment a city plants its flag in a young talent's mind. The city where they attended their first international congress is rarely forgotten.

Stage 2: Connect

The talent is no longer just observing, but they are beginning to contribute. They are presenting work, joining committees, volunteering for association roles, and forming peer relationships for collaboration. This is where reputation is established and where belonging to a global community begins to feel real.

From The ICCA Research Desk

Attendees reported gaining new techniques (56%), new skills (64%), and novel ideas (70%) that directly advanced their careers when attending conferences and meetings.

85%

of young researchers call conference networking essential or very important.

27%

of scientific papers now have international co-authors — up from 22% in 2013.

The OECD reports that 27% of scientific papers now carry international co-authors, up from 22% in 2013. International conferences are consistently identified as the primary platform where those collaborations begin.

Stage 3: Attract

Established professionals have a publication record, a network, and a reputation. They also have choices. Research on how highly skilled professionals make those choices is consistent: they move toward places with networks, communities, and proximity to the global edge of their discipline rather than simply toward jobs or competitive salaries.

This is where international and regional association meetings do something that no recruitment brochure, university ranking, or visa incentive programme can replicate. When an established professional attends a congress in your city, they experience your ecosystem directly, not just the programme. They meet your faculty over dinner. They visit your campus during a field trip. They hear your graduate students ask sharp questions from the floor. They encounter your city as a place where their kind of work is taken seriously, and they begin, perhaps for the first time, to imagine themselves in it.

The UKRI Global Mobility Evidence Report (2025) found that access to professional networks and the opportunity to work with leading researchers were among the most cited factors in researchers' decisions to relocate.

The meeting is the audition. For the researcher deciding where to build the next chapter of their career, that experience carries more weight than anything a recruitment committee could put in writing.

54%

of Global Talent Visa holders cited access to professional networks as a key factor in their decision to relocate.

93%

cites professional environment, including working with leading researchers, as important in their relocation decision.

Stage 4: Retain & Evaluate

The final stage is the one most frequently overlooked yet the most powerful for long-term destination development. When a country's own researchers participate in international association meetings hosted at home, something more than retention happens. They grow.

Hosting brings local talent into direct contact with the world leaders of their field. That contact elevates their profile, their visibility, and their standing within the global community of their discipline. A local professor who becomes internationally recognised through participation in a congress held in their own city stays and becomes an asset that compounds. They attract collaborators. They draw funding. They become the person that the international community always think of.

And then they become the mentor. The graduate student who attended the Expose stage meeting six years ago is now in the room at a more senior level, watching that local leader on stage, understanding for the first time that this path is possible here, in this city, in this field. The cycle restarts deeper, more internationally connected, and more rooted in local excellence than before.

Brain drain is driven by more than pay. Disconnection from global research communities, limited access to international peers, and the sense that one's work is not visible to the world all play a role. International and regional association meetings address all three directly without requiring a single researcher to leave.

“Conferences attract researchers to a city. Those researchers bring their networks. Those networks become the basis for collaborations, partnerships, and in some cases, the decision to stay..”

The pipeline works in both directions, and it compounds with every cycle. A city that regularly hosts high-profile international congresses in its strongest sectors does not just signal seriousness about those fields, it builds, year by year, the very ecosystem that makes it serious. The meeting is not a recruitment event. It is the infrastructure through which a destination grows its own talent, attracts the world's, and earns the right to keep both.

From The ICCA Research Desk

Case study – Rwanda: A Lifecycle in Action

To understand how the talent lifecycle works in practice, look at Rwanda. In a little over a decade, this landlocked East African nation has moved from a tentative entrant in the global meetings industry to one of its most compelling stories. Not by chance, but through a deliberate, government-led strategy that validates the lifecycle framework almost exactly. ICCA is proud to be a partner at every stage of this journey.

16

ICCA-tracked meetings in 2016

32

ICCA-tracked meetings in 2025

2nd

Kigali's rank among African cities, ICCA 2024 — held for five consecutive years

\$94M

Rwanda tourism revenue generated by MICE in 2025, up from 29. M in 2014.

Rwanda's story maps onto the talent lifecycle stage by stage. Each decision the country made corresponds directly to a phase of the framework, and each phase created the conditions for the next.

Stage 1: Expose. Rwanda joins ICCA, establishes the Convention Bureau

In 2014, Rwanda Convention Bureau was established and joined the ICCA global community. At the time, Rwanda ranked 13th in Africa for the number of meetings hosted. The country had world-class ambitions but limited visibility. Joining ICCA was the moment Rwanda raised its hand and said: " We are here, we are serious, and we want to learn. MICE revenue stood at USD 29.6 million. Conference visitors numbered fewer than 18,000.

Stage 2: Connect. Infrastructure, community, and first major wins

From 2015 to 2019, Rwanda invested in a network of world-class venues, the Kigali Convention Centre, Intare Conference Arena, and Kigali Convention and Exhibition Village. This is while they actively participated in the ICCA community, attending conferences, building relationships, and learning from established destinations. By 2016, MICE revenue had grown to USD 47 million, and conference visitors had nearly doubled to 35,100. Rwanda moved from 13th to 3rd in Africa.

Stage 3: Attract. Signalling capability to the world

From 2020 to 2024, the connections made in global meeting rooms translated directly into bids won at home. The World Economic Forum on Africa, CHOGM 2022, the 73rd FIFA Congress in 2023 with over 1,500 delegates, and the Women Deliver Conference in 2023 with more than 6,000 participants.

Kigali achieved and retained second place in Africa in the ICCA city rankings for five consecutive years. Visa-on-arrival for all nationalities, expanding RwandAir connectivity, sustainability credentials, and a reputation for safety and efficiency meant that international associations began selecting Kigali not as an emerging bet, but as a proven choice. The 13th International AIDS Society Conference arrived in 2025. The destination was no longer signalling ambition. It was demonstrating delivery.

Stage 4: Retain & Elevate. growing the discipline, restarting the cycle

The increase from one ICCA member in 2014 to ten in 2025 demonstrates the destination's growth and maturity. In early 2025, ICCA launched its first dedicated skills development hub on the African continent in Kigali, delivering CICS and CICE professional certification programmes to the next generation of African meetings industry professionals. Rwanda is no longer just a host. It is a training ground and a knowledge centre. Then came the announcement that will define the next chapter: the 66th ICCA Congress will be held in Kigali in October 2027, the first time in 20 years the ICCA Congress returns to Africa. Thousands of senior industry leaders, association executives, and global decision-makers will gather in Rwanda's capital. The cycle in Rwanda begins again at a higher level than before.

Rwanda's journey is a national development story in which international association meetings served as the mechanism for building capability, credibility, and connection at every stage. ICCA has been proud to walk that journey with Rwanda, and the story is far from over.

DISRUPTORS & OPPORTUNITIES IMPACTING INTERNATIONAL MEETINGS TODAY

The international meetings industry has navigated disruption before, but rarely all at once. Today, technological shifts, geopolitical tensions, and climate pressures are converging. Destinations, venues, and the associations they serve are managing all simultaneously, and the decisions made now will define the competitive landscape well into the next decade.

This section maps the terrain and the opportunity within it.

TECHNOLOGY, DATA & ARTIFICIAL INTELLIGENCE (AI)

THE SIGNAL

According to ICCA's 2026 Association Meeting Needs & Trends Report, 62% of associations are using AI for marketing and content creation, 30% for conference reporting, and 24% for venue selection, figures that have grown significantly since 2024. Technology is the second-ranked subject area in ICCA's global meeting data, with 2,363 meetings recorded in 2025. AI adoption among meeting professionals has reached 50%, up from near-zero three years ago.

The adoption numbers tell only part of the story. Tech stacks remain fragmented. Tools don't talk to each other. Association planners, who are already stretched thin, don't have time to evaluate new platforms, so they stay with what they know, even when it's not working. Technology promised to simplify. For many, it has done the opposite.

Beneath the fragmented tools lies a deeper problem: fragmented data. Associations sit on years of attendee behaviour, registration patterns, session engagement, and member demographics, but most of it is siloed across platforms that were never designed to work together. The result is that decisions about programme design, pricing, venue selection, and delegate acquisition are still being made largely on instinct rather than intelligence.

For destinations and venues, the challenge is equally acute. Market data on association pipelines, competitive positioning, and sector demand exists, but it is scattered, inconsistent, and rarely actionable at the speed the market now requires.

There is also a growing human cost to the information environment technology is creating. Delegates arrive overloaded, skeptical of content they can't verify, and increasingly protective of their time and attention. Research shows professionals are no longer curious about new technology for its own sake. They want to know, immediately, what it solves for them. The era of "let's try it and see" has given way to "show me it works, or don't bother."

This is producing a counterintuitive but important signal: as the digital environment becomes noisier, less trusted, and harder to navigate, the value of physical gathering is rising. People are attending congresses to learn and find out what is actually happening in their field from people they trust.

AI has paradoxically made in-person meetings more essential.

WHAT'S AT STAKE

62%

of associations use AI for content and marketing.

Fewer than 1 in 4

have integrated it into venue selection or programme planning.

50%

of meeting professionals now use AI tools, yet most report that their core tech stack remains incomplete or disconnected.

THE OPPORTUNITIES

For Destinations

Meetings will always be needed, especially during periods of change. Every industry navigating AI disruption, from medicine and law to engineering, finance, and education, needs a platform to work through the transformation together. International association meetings are that platform. Destinations that understand which industries in their city and country are being impacted by technological advancements and actively position themselves as hosts for those conversations will see significant gains in meeting acquisition.

Investing in technology capacity and the talent to use it effectively within CVBs and DMOs is equally critical. AI-powered business intelligence, automated bid templates, and personalised client outreach will soon become baseline expectations. Destinations that build this capability now will move faster and pitch smarter in an increasingly competitive global market.

But the more profound opportunity lies in data. The destinations that learn to understand which sectors are growing, which associations are ready to move, and where competitive gaps exist will shift from reactive bidding to proactive pipeline development. This is where the next generation of destination competitiveness will be won. ICCA is investing heavily in this direction, continuously enhancing its already comprehensive business intelligence platform to provide members with even more actionable market insights.

For Venues

Delegates now expect reliable, high-speed, affordable connectivity. Venues that can credibly position themselves as future-ready spaces, equipped for reliable internet infrastructure, hybrid programming, AI-assisted wayfinding, and flexible tech integration, will stand out in a crowded market.

Equally important is what venues can offer that technology cannot: the third place, a neutral space for real human connection away from the noise of daily work and digital life. As information overload grows, spaces designed for focused dialogue and low-distraction engagement are more attractive to planners and delegates alike. The venue is as much an antidote as a platform.

The data opportunity is more immediate than most venues realise. Venues collect extraordinarily rich behavioural data on how delegates move through spaces, which sessions fill, where networking clusters naturally form, and how catering and room configurations perform across different congress types. Most of this goes unmeasured or unreported. Venues that begin to capture, structure, and share this intelligence with planners, destinations, and associations become strategic partners rather than space providers. In a market where associations are demanding more evidence-based programme design and planners are under pressure to justify every budget line, the venue that can say "here is what the data tells us works" can have a conversation no competitor can.

For further insights on venue management, revenue, and emerging trends, contact your regional director to request a summary report from the ICCA Global Venue Experts Forum, Beijing.

For Meetings and Events Management

The PCOs and agencies who will win in the next five years are those who become their clients' technology translators. Most association executives want the benefits of AI and modern event tech but lack the bandwidth, budget, confidence, or internal expertise to implement them. Companies that can audit, recommend, integrate, and manage technology on behalf of their clients, turning a fragmented stack into a coherent experience, will become indispensable.

This is also an opportunity to lead on programme design. As attention becomes scarcer and delegate expectations evolve, the traditional congress format needs to be rethought. Companies that bring evidence-based approaches and fresh ideas to session design, networking architecture, and attendee journey mapping will differentiate on value, not just execution.

And then there is data. PCOs touch every part of the congress: registration, sessions, catering, networking, surveys, and logistics. That means they are, by default, sitting at the intersection of more attendee and operational data than almost anyone else in the supply chain. Most of it is currently returned to clients in a post-event report and then forgotten. Companies that build the capability to aggregate, interpret, and return that data as strategic insight year over year, across congresses, across association types, will shift their positioning entirely. They stop being vendors hired per event and become the institutional memory of their clients' meeting programmes.

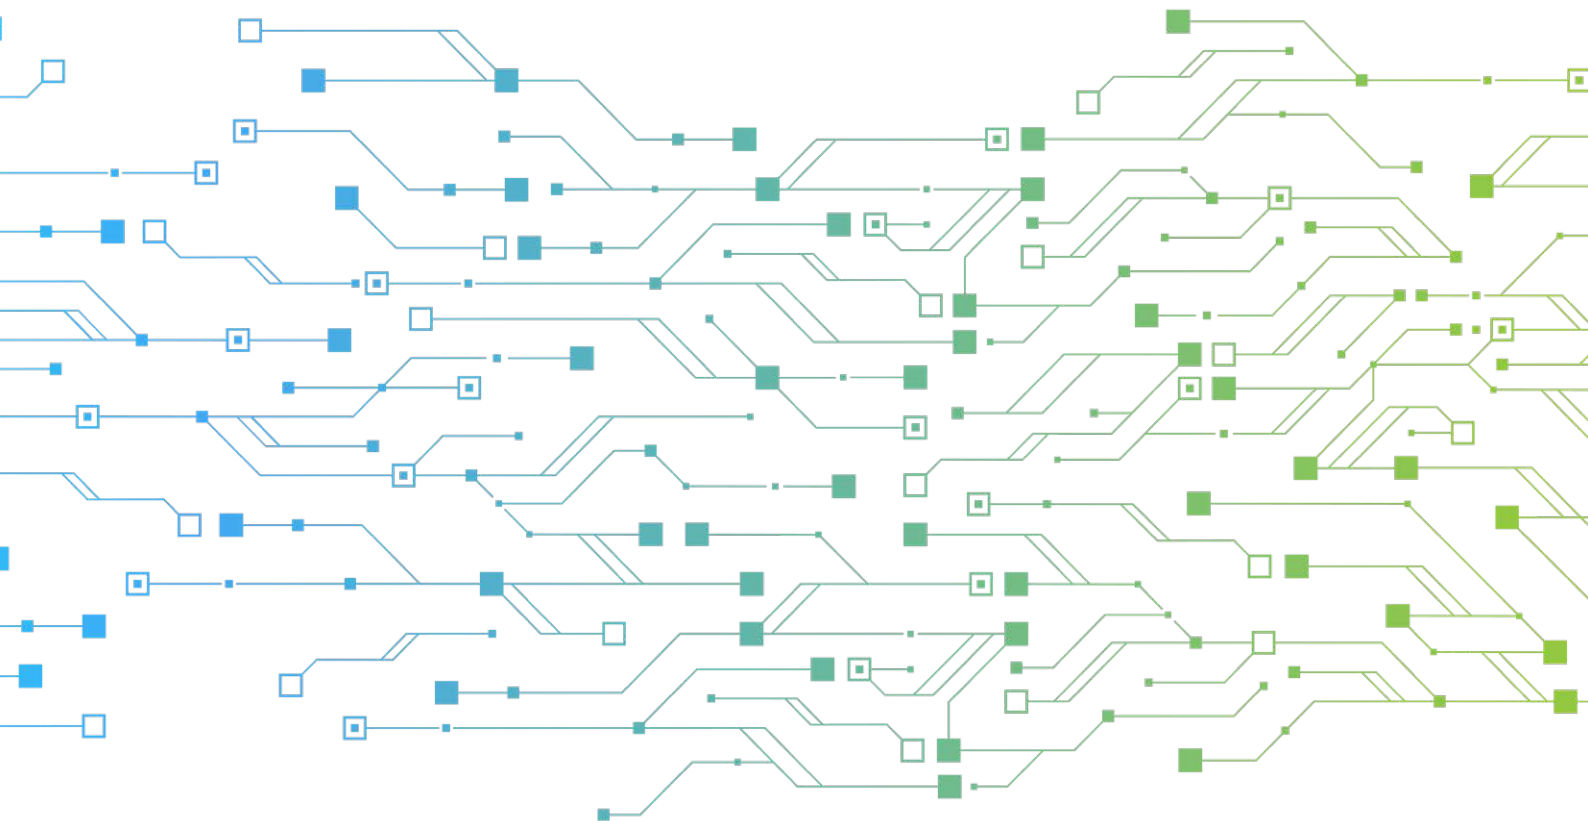

For Meetings and Events Solutions

The pain points are known. The whitespace is real.

Association planners are looking for tools that actually work together, reduce their workload, and deliver visible results. Suppliers who solve integration problems rather than feature gaps are addressing the real need. Platforms that seamlessly connect registration, abstract management, exhibition logistics, and delegate data in a single coherent experience without a six-month implementation are what the market is asking for.

Beyond integration, there is an emerging, underserved demand for tools that help planners verify content, flag AI-generated material, manage data privacy, and communicate transparently with delegates about how technology is used at their event. The next category of must-have event technology may not be about efficiency. It may be about trust.

And underneath it all sits the data problem. The meetings industry generates an enormous volume of behavioural, operational, and sector intelligence every year. Almost none of it is structured, connected, or returned to the people who need it in a usable form. There is no dominant platform. No clear standard. No obvious incumbent. The supplier or startup that builds the infrastructure to simultaneously turn meeting data into actionable market intelligence for destinations, venues, associations, and agencies will be defining a category.

GEOPOLITICAL AND INTERNATIONAL MOVEMENT

THE SIGNAL

International meetings depend on people moving, and that has grown much more complex. Trade tensions, regional conflicts, and perceived instability shape where delegates will and won't travel.

UN Tourism estimates 1.52 billion international tourists in 2025, a 4% overall rise, but gains were uneven. For business events, global business travel growth in 2025 was revised from 10.4% to 6.6%, with trade policy uncertainty as the main driver ([Global Business Travel Association](#)).

Many regions are navigating a perception challenge that often outpaces the actual security situation on the ground. Associations are factoring in current conditions as well as the reputational trajectory of a destination: how it is likely to be perceived by delegates at the time of the event. A destination that is objectively safe may still lose a bid if its region is subject to political noise. Conversely, destinations that actively and transparently communicate their stability and their track record of successfully delivering events hold a real competitive edge.

WHAT'S AT STAKE

34%

of meeting professionals cite **destination safety** as their top consideration when selecting a host city (ICCA Association Survey)

25%

rank **economic and political stability** as a primary selection factor (ICCA Association Survey)

THE OPPORTUNITIES

For Destinations

Destinations can stand out by demonstrating operational reliability, transparent communication, and responsiveness to the government during uncertain times.

There is also a direct opportunity: if one destination becomes unavailable or undesirable, the meeting relocates. Destinations that strategically position themselves as reliable alternatives, offering fast-track bid support, flexible contracting, and a genuine willingness to work around an association's constraints are likely to capture displaced demand. This is the readiness advantage.

In the long term, destinations in regions with improving accessibility, through e-visa programs, bilateral visa waivers, and expanded air connectivity, have a stronger edge in attracting delegate groups with the most complex travel demands.

For Venues

An association considering relocating a meeting, sometimes with very little lead time, needs a venue that can move quickly, offers flexible terms, and demonstrates exceptional operational readiness. Venues with established relationships, streamlined communication with local authorities, and the ability to configure their spaces and rearrange groups within a tight timeline will be called first.

This is also a moment for venues to work more closely with their destination partners. Venues that can speak with authority about the local environment and that are embedded in the destination's support infrastructure add tangible value to the conversation in uncertain times.

For Meetings and Events Management

An association with a congress planned in a city that suddenly feels uncertain needs an advisor with experience and global reach. This includes the network, knowledge, and judgment to assess the situation and, if needed, execute a pivot. PCOs and agencies that operate across multiple continents, maintain active supplier relationships in multiple markets, and have documented contingency planning capabilities are in a fundamentally stronger position with association clients today.

Agencies should also use this moment to formalise risk assessment, scenario planning, and crisis communication support. Clients increasingly expect this to be part of the service. Agencies that build this into their standard offering and can articulate it clearly in pitches will differentiate from those that don't.

For Meetings and Events Solutions

As cross-border shipping becomes more expensive and less predictable, driven by tariffs, customs complexity, and supply chain volatility, the traditional model of shipping event materials, exhibition builds, and production equipment internationally is under strain. The opportunity lies in localisation: building or partnering with a network of trusted, quality-assured local suppliers across key markets worldwide.

For suppliers that can offer clients a single point of accountability, executed through in-market partners, the value proposition is compelling.

THE SIGNAL

According to the 2025 ICCA and Destination Canada State of Sustainability in Associations report, 66% of associations rate sustainability as very or extremely important, up from 60% in 2023. Most have embedded it into event planning and strategic processes.

However, the gap between commitment and accountability remains wide. Only 12% of associations report sustainability efforts in their annual reports, and just 24% include specific sustainability criteria in their RFPs.

A global study analysing 2,091 events disrupted by extreme weather between 2004 and 2024 found an apparent increase in weather-related incidents over time across mature event economies, with disruptions spanning business events, sport tourism, festivals, and mass gatherings (source: [ScienceDirect](#)). The past three years rank as the highest on record for the annual number of billion-dollar weather disasters globally: 2023 saw 28 events, 2024 saw 27, and 2025 saw 23, all well above the historical annual average of 9 (source: [Climate Central](#)).

The average time between billion-dollar disasters in the US has fallen from 82 days in the 1980s to just 19 days over the last decade (source: [Climate Central](#)).

Destinations, venues, and meeting planners are now factoring extreme weather into every stage of event planning, from site selection to contingency contracts.

The sustainability expectations associations carry into hosting decisions are increasingly shaped by the broader community of their membership, particularly European-based associations and those aligned with the UN Sustainable Development Goals. For these associations, choosing a host destination is, in part, a matter of aligning with their members' values. Destinations that have invested in sustainability, as event infrastructure and a city-wide commitment, carry that alignment effectively.

WHAT'S AT STAKE

66%

of associations rate **sustainability** as very or extremely important, up from 60% in 2023 (ICCA & Destination Canada, 2025)

12%

Only 12% report **sustainability efforts** publicly. Only 24% include **sustainability criteria** in RFPs (ICCA & Destination Canada, 2025)

2,091

global events were reported as **disrupted** by extreme weather between 2004 and 2024, with incidents increasing over time (ScienceDirect, 2025)

55
billion-dollar

weather disasters hit the planet in 2025 alone, the third-highest annual count on record (Yale Climate Connections)

THE OPPORTUNITIES

For Destinations

Destinations that make significant progress on environmental infrastructure, social equity, and community well-being and are aligned with the UN SDGs are becoming more attractive to associations. They are also improving the quality of life for the people who live there. This dual return is a compelling argument a destination can make to local government for continued investment in the meetings sector.

As with geopolitical disruption, extreme weather also creates an opportunity for readiness. Destinations with documented resilience plans, fast-response infrastructure, and clear communication protocols for extreme weather scenarios will be chosen. And when another destination is affected, those with demonstrated readiness will capture displaced meetings.

For Venues

Green buildings are financially smarter buildings. Energy efficiency, water management, waste reduction, and renewable energy sourcing are sustainability credentials that directly reduce operating costs over time. Venues that have made these investments can articulate their sustainability performance in concrete terms, giving planners the data they need to satisfy their own reporting requirements.

ICCA has launched a [Food-Waste Management Toolkit for Associations](#). This resource was inspired by the Bangkok Protocol on Sustainable Gastronomy, a framework developed from the 2023 ICCA Congress in Bangkok. The Toolkit provides a roadmap for associations to set strategic guidelines to transform event food and beverage planning, significantly reducing food waste and promoting sustainable gastronomy. We encourage our members to use the toolkit to support their association clients in this movement.

Beyond operations, venue resilience in extreme weather is becoming an essential differentiator and is increasingly appearing in RFPs and site inspection checklists.

For Meetings and Events Management

When an event is threatened by extreme weather, the PCO's response defines their relationship with that client for years to come. Agencies that have invested in contingency planning frameworks are better prepared and positioned to win the association's trust.

Sustainability advisory is equally underserved. Most association planners want to deliver on their commitments but lack the local knowledge to do it effectively. PCOs with destination-specific expertise who know which local suppliers are certified, which venues have credible environmental credentials, and how to structure a congress that actually reduces its footprint become essential guides.

For Meetings and Events Solutions

The meetings context still lacks a dominant platform, an agreed standard, or a clear incumbent for sustainability measurement and reporting. Many associations now need to report, destinations need to demonstrate impact, and planners need tools that make compliance practical. Suppliers who build credible, accessible solutions in this space, carbon calculators integrated into event management platforms, supplier sustainability scorecards, or real-time impact dashboards, are addressing a problem the market has not yet solved well.

On the extreme-weather side, tools that support real-time risk monitoring, automate communication with delegates during disruptions, and manage contingency logistics represent another largely unexplored category. The meetings industry's approach to crisis management has historically been reactive and manual. The technology to change that already exists in adjacent industries. Whoever brings it to meetings first will have a clear market advantage.

REGIONAL INSIGHTS

While the global picture tells one story, the regional view reveals the diversity. Each region reflects different stages of growth, unique challenges, and strategic priorities, but all share a commitment to advancing the power and impact of international association meetings.

AFRICA

Written by **Frank Murangwa**, Regional Director Africa

TOP 5 BY COUNTRY

Rank	Country / Territory

2	Morocco
3	Kenya
4	Egypt
5	Rwanda

TOP 5 BY CITY

Rank	City, Country / Territory
1	Cape Town, South Africa
2	Kigali, Rwanda
3	Nairobi, Kenya
4	Cairo, Egypt
5	Kampala, Uganda

**For complete regional ranking, please visit the static report section on page 108.*

[SEE FULL RANKING](#)

Africa continues to demonstrate strong growth. Increasingly, governments are establishing National Convention Bureaux and developing National MICE Strategies that guide the sector's growth and ensure coordinated destination marketing.

REGIONAL LANDSCAPE

South Africa remains the continental leader, with **Cape Town** consistently ranked as Africa's top destination for hosting international association meetings. **Rwanda's** capital, **Kigali**, retains its second position, followed by **Nairobi, Kenya**. Nairobi's rise reflects the Kenyan government's strategic focus on positioning the city as a leading regional business events hub.

Kigali will be hosting the **2027 ICCA Congress**, and the establishment of the ICCA Skills Hub for Africa further cements Rwanda's leadership role in capacity building and professional development for the business events industry. The construction of the Bomas International Convention Complex and the expansion of Jomo Kenyatta International Airport signal **Kenya's** readiness to host large-scale global events. **Namibia** has launched a National Convention Bureau and **Zambia** is developing a National MICE Strategy, demonstrating a growing recognition of the sector's potential to drive economic diversification and international visibility. **Ethiopia's** role as host of COP 32 in 2027 is a milestone for Africa as a whole, showcasing its ability to stage events of global significance.

MAKING THE CASE

Across the continent, destinations are recognising the business events industry as an engine for socio-economic development. **Cape Town** leverages its reputation for world-class facilities and scenic appeal to attract international medical and scientific congresses. **Kigali** has become synonymous with efficiency and safety, hosting high-profile summits such as the Commonwealth Heads of Government Meeting.

Nairobi is increasingly chosen for regional trade fairs and technology expos, reflecting **Kenya's** role as an innovation hub. **Accra** is positioning itself as a hub for pan-African trade and cultural exchange, hosting events that align with the African Continental Free Trade Area. These destinations are competing for events while also showcasing Africa's diversity, resilience, and innovation.

LEGACY

International association meetings in Africa are leaving tangible legacies that go beyond tourism revenues. Climate summits and health conferences have shaped national policies, such as renewable energy adoption and public health strategies. Events often include outreach initiatives, such as medical congresses that offer free clinics or educational workshops for local communities. The World Travel and Tourism Council in Kigali (2023) emphasised sustainable tourism models, leaving behind frameworks that local operators continue to implement.

LOOKING TO 2030

Africa's business events industry is projected to grow faster than the global average. Africa's young population is driving demand for innovation, entrepreneurship, and knowledge exchange, and the **AfCFTA** is creating a unified market, boosting intra-African trade fairs and conferences. African destinations are increasingly adopting green event practices, positioning themselves as leaders in **sustainable meetings**. By **2030**, Africa expects to be recognised as a **global leader** in shaping the future of business events.

SEE FULL RANKING

NORTH AMERICA

Written by **Shawn Cheng**, Regional Director North America

North America held its ground in 2025. **The U.S.A.** remained the world's top-ranked country, a position it has held for three decades. **Montréal** secured its ninth consecutive year at the **top** of the North American city rankings. In a highly competitive global market, maintaining rank demands continuous effort. Each country still has much to unlock.

REGIONAL LANDSCAPE

Figure 16: City concentration — how spread out is each country's meetings?

With **792** meetings across **211** cities, the **U.S.A.** operates as dozens of meeting destinations simultaneously. **Washington D.C., Atlanta, San Diego, New Orleans,** and **Houston** all appear on the global board, yet **D.C.** accounts for just **6%** of the national total.

Canada's 312 meetings across **32 cities** tell a different story. **Toronto, Montréal,** and **Vancouver** lead nationally, while Calgary, Banff, and Edmonton together account for nearly a fifth of Canada's total delegate volume, driven by the \$500 million BMO Centre expansion and deliberate provincial investment in legacy, impact, and public, private, and Indigenous community partnerships. **Mexico's 191 meetings** across **36 cities**, led by **Mexico City**, reflect a genuine geographic reach, with Cancún, Guadalajara, Mérida, Monterrey, Puebla, and Querétaro all on the global board, alongside a further 22 cities with one to several meetings each.

MAKING THE CASE

The most compelling advocacy story in North America belongs to **Canada**. Since its launch, Canada's International Convention Attraction Fund (ICAF) has committed \$30.5 million, securing **116 events** projected to generate **\$803.3 million** in direct economic impact, a **20:1 return**. Cities from St. John's to Victoria have won bids they could not have competed for without it. It is one of the few national bid-support mechanisms in the world that can demonstrate measurable, pre-validated return on investment at the government level. In April, the country is pleased to hear that the Government of Canada has renewed the program with a \$15 million investment over the next three years. This is a vote of confidence in a proof-of-concept model that policymakers in other countries have been watching closely.

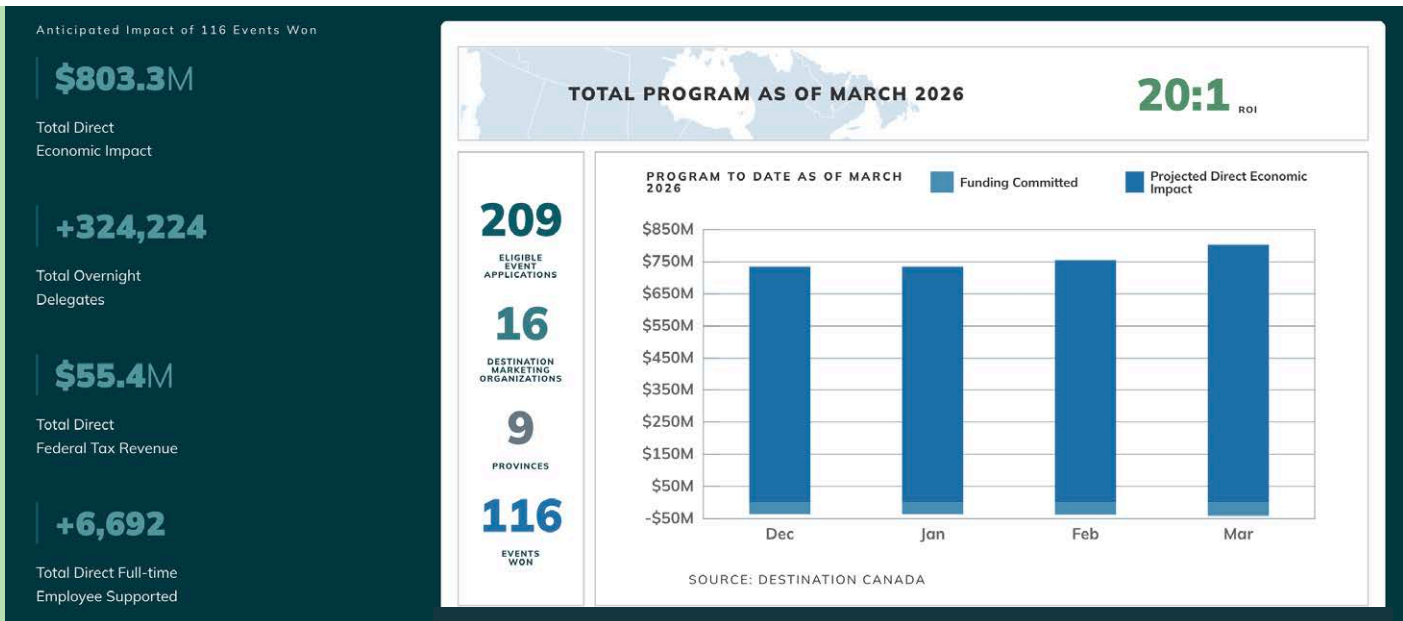

Figure 17: ICAF Program Performance As Of March 2026.

Source: <https://www.tourismdatacollective.ca/#icaf-3>

LEGACY

Behind Canada's depth is a **national network of local champions**. These networks connect industry, academic, and association leaders across the country with opportunities to bid for international conferences in their own fields.

Toronto's Leaders Circle has 102 recognised ambassadors, \$265,000 awarded through its Research Grant programme, and an estimated \$435 million in economic impact. It demonstrates what happens when local intellectual capital is mobilised for international bid development. The pipeline already secured includes the World Chambers Congress in 2027 and the International Congress of Inborn Errors of Metabolism in 2029, reflecting the long planning cycles that ambassador-driven strategies are built to work within.

Destination Canada is also taking legacy measurement further. Its Legacy & Impact Study, a world first in scope and methodology, is analysing 15 business events held between 2018 and 2024 across Canada's six priority economic sectors. The study tracks economic returns, research collaborations, policy shifts, trade connections, and community outcomes: the full iceberg of what a meeting leaves behind.

LOOKING TO 2030

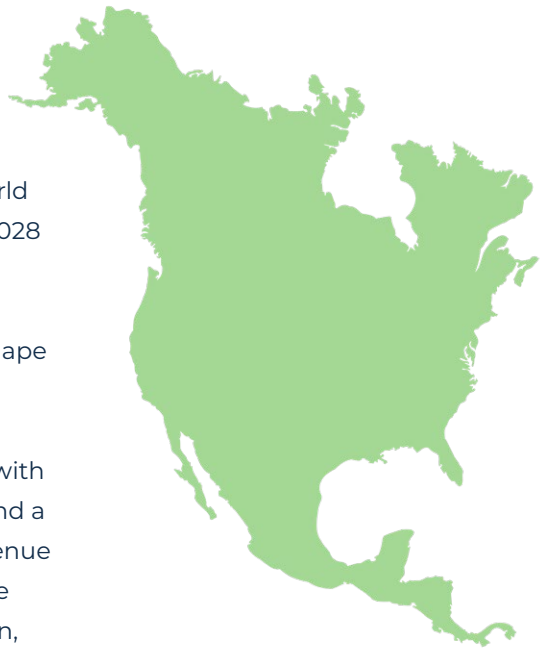

In Canada, three ICAF-supported wins are filling the calendar for the next few years: the World Road Congress in Vancouver in 2027, the World Conference on Earthquake Engineering in Montréal in 2028, and the 2028 International Geological Congress in Calgary.

For the rest of the region, the horizon is defined by forces that will reshape how the world sees North America:

The 2026 FIFA World Cup, the first to span three nations, with 16 host cities across the US, Canada, and Mexico, is both a disruption and a generational opportunity for the region. In the short term, hotel and venue constraints are disrupting traditional association meeting patterns. The infrastructure it triggers, from transit upgrades to hospitality expansion, will make host cities more competitive for congresses in 2027 and beyond.

For Mexico in particular, the visibility delivered to Mexico City, Guadalajara, and Monterrey is doing in months what years of slower-paced development could not.

The **USMCA**'s mandatory six-year review is set for July 2026. The outcome will not appear in next year's rankings, but its impact will influence the next decade. A renegotiation that deepens regional cohesion creates more cross-border knowledge flows and more reasons for international associations to choose North American cities. Sustained uncertainty produces the opposite. Associations making long-lead destination decisions are watching.

LATIN AMERICA AND THE CARIBBEAN

Written by **Andrés Escandón**, Senior Regional Director Latin America & the Caribbean

Latin America recorded **1,124 meetings** in 2025, up from **903** in 2024. Continuous growth, year on year. The region has moved past the question of why the international association meetings are important. The conversation now is where to invest, what is most strategic, what delivers the highest return.

REGIONAL LANDSCAPE

The main message beyond the ranking is market maturity. Each destination, both at the country and city levels, has been investing differently, moving beyond the usual destination marketing and promotion approach. **Colombia's** multi-city meetings strategy, **Panama's** positioning as an association and investment hub, and **Brazil's** advances in technology meetings as an internationalisation strategy (**Rio de Janeiro** and **São Paulo** as examples) are the key cases.

Figure 18: Meeting counts from 2020 - 2025 in Latin America

MAKING THE CASE

At the ICCA Latam Summit in Medellín, the region launched the **Global Events Global Cities Framework**, the first of its kind worldwide. It integrates investment promotion, city internationalisation, innovation and knowledge ecosystems, and cluster development into a destination's meetings strategy.

When destinations bring this framework to governments, policymakers, and decision-makers, it positions the meetings industry as an instrument of a larger city development strategy rather than a secondary tourism segment.

In partnership with UN Tourism and the Latin American Development Bank, the **Investment and Technical Guide on Meetings and Events** was launched and announced in Bogotá in April 2026. One more tool beyond the usual narrative of tourism.

LEGACY

The Costa Rica Convention Centre offers one example of how a sustainability commitment, embedded from the start, becomes a competitive position. Opened in 2018 and owned by the Costa Rican Tourism Board, the centre achieved LEED Gold and EDGE certifications alongside AIPC Gold Level quality standards. Its proprietary [CarbonClear Events](#) framework, developed by operator Grupo Heroica, measures, mitigates, and certifies the greenhouse gas emissions of every event hosted. The carbon footprint of 100% of events held at the centre is neutralised at no additional cost to organisers.

The result is a venue that attracts associations with strong environmental commitments. For emerging destinations, it is a working template: a purpose-built sustainability model that competes directly for international association meetings where environmental credentials are part of the selection criteria.

The municipality of Córdoba, in Argentina, developed a unique social impact legacy tool, in partnership with Insight 21, a think tank from the Universidad Siglo 21. This framework will measure the social impact of international events in the city through a series of scientifically supported tests and actions. The initiative already has several active examples, and it is part of the destination's legacy strategy.

LOOKING TO 2030

In collaboration with regional authorities and aligned with ICCA's Global Vision 2030, Latin America and the Caribbean's Regional Vision 2030 sets out a seven-pillar strategic framework to elevate the region's global competitiveness in international association meetings over the next five years. The framework spans business generation, strengthening the regional associations ecosystem, and developing sector-led public policies, alongside regional impact measurement, digital transformation, integrated marketing, and talent development. Each pillar carries a detailed action plan that reflects a deliberate shift from reactive event hosting to a long-term, purpose-driven industry strategy. Together, the seven pillars position Latin America and the Caribbean as an active architect of the knowledge, legacy, and value that international meetings create.

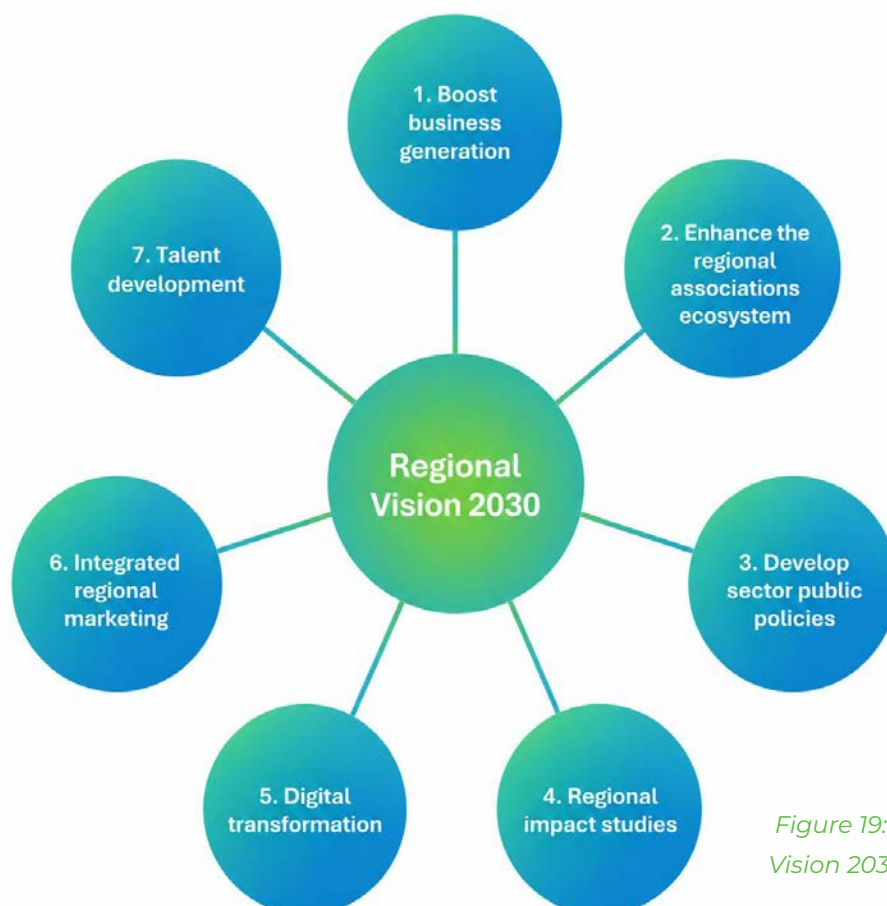

Figure 19: Latin America Vision 2030 - Seven Pillars

COSTA RICA UNDERSTANDS THAT CONVENTION CENTERS ARE PLATFORMS FOR SUSTAINABLE DEVELOPMENT

Costa Rica Convention Center by Heroica · San José, Costa Rica

Reshaping the industry

For years, sustainability in convention centers was measured by what happened inside the building: energy efficiency, waste management, architectural design.

Today, the meetings industry poses a deeper question:

What is the true impact of a venue on the community around it?

Convention centers are evolving: from event infrastructure to platforms that connect territories, link communities, and activate sustainable economic ecosystems.

Legacy Link

A program connecting international congresses with university students through free learning sessions delivered by international speakers, leaving lasting knowledge legacy in the local community.

“Sustainability in tourism and the meetings industry should not be limited to a building or a specific operation. It must be understood as a joint effort where the venue, the destination, and the community develop sustainable growth together.”

Gustavo Alvarado-Director of Tourism Management, Costa Rican Tourism Board (ICT)

Beyond the building: territorial sustainability

The question is no longer only how the venue operates, but how it can positively influence the development of the surrounding territory.

Costa Rica International 2030 Vision

In 2024, the Costa Rica International Tourism Board (ICT) and Grupo Heroica articulated this strategy to position the Costa Rica Convention Center as the integrator of its surrounding business ecosystem — hotels, restaurants, services, and urban developments — as a single competitive product for the international market.

ICCA Sustainability Partner Alliance

The Costa Rica Convention Center is part of the Costa Rica International Tourism Board (ICT) Sustainability Partner program, advancing a collective integration vision for the meetings ecosystem around the venue, where businesses and communities collaborate to build more sustainable and competitive development models.

Under development:

3 additional hotels under construction

Savia: large-scale development including entertainment, residences, free trade zones, hotels, and corporate buildings

A NATIONAL COMMITMENT - HORIZON

Starting in 2026, a larger-scale initiative will be launched to elevate the international positioning of the Costa Rica Convention Center business ecosystem.

The goal: by 2030, consolidate a sustainable meetings ecosystem where hotels, restaurants, businesses, and services operate under a shared narrative of competitiveness and destination experience — and double the economic impact by positioning Costa Rica as a knowledge hub in Latin America.

Costa Rica decided to invest strategically in the future of the meetings industry.

— ICT CCCR 2030 Vision

“When a convention center successfully connects businesses, community, knowledge, and sustainability, it stops being just a venue. It becomes a transformation engine for the destination”

Álvaro Rojas - General Manager, Costa Rica Convention Center – Grupo Heroica

**Sustainability is not merely a feature of a building.
It is the capacity to connect communities, economies, and territories
toward a shared future.**

**For complete regional ranking, please visit the static report section on page 99.*

SEE FULL RANKING

Asia Pacific is a highly connected network of economies, industries, and professional communities, driving steady growth in international and regional association meetings. A **33% increase** between 2023 and 2025 reinforces its position as the **world's second-largest region**. This strength is evident in global rankings, with 14 Asia Pacific countries and territories, and 14 cities, placed within the world's Top 50, accounting for nearly 30% of the global total and underscoring the region's growing weight and competitiveness. Increasingly, meetings are positioned not as standalone events, but as platforms that drive economic and societal progress in host destinations. Connectivity, sector depth, and sustained investment operate together within a connected and interconnected regional environment, creating conditions where meetings are closely aligned with other economic activities and long-term development priorities.

Globewatch Business Analytics: Association Meetings (2023-2025)

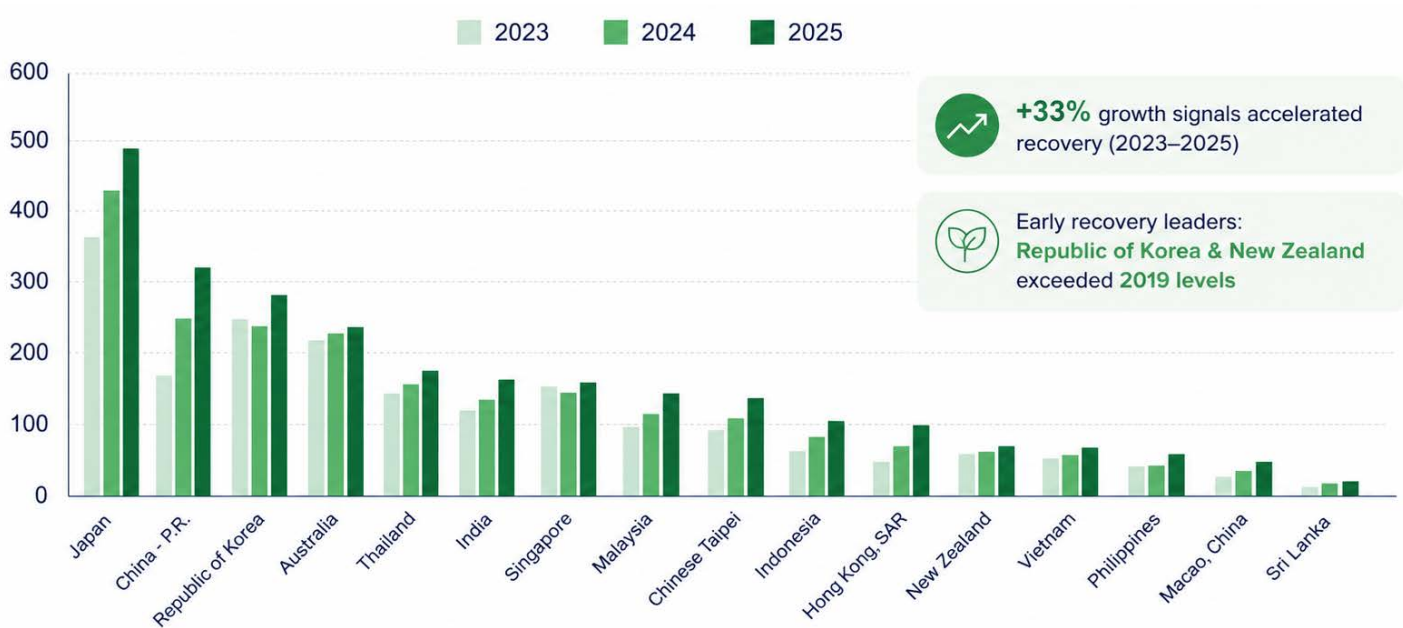

Figure 20: Asia Pacific growth signals 2023-2025

REGIONAL LANDSCAPE

Across Australia, China-P.R., Chinese Taipei, Hong Kong, India, Indonesia, Japan, Macao, Malaysia, New Zealand, the Philippines, the Republic of Korea, Singapore, Sri Lanka, Thailand, and Vietnam, the development is varied but interconnected. Advanced economies and rapidly developing markets operate in parallel, allowing the region to generate demand across sectors and stages of development simultaneously. At the same time, Asia Pacific functions as both an **innovation hub** and **economic powerhouse**, with strong research and technology ecosystems across East Asia, rapidly expanding digital and engineering capabilities in Southeast Asia, and growing scale and transformation across South Asia. This combination creates a region where sector development, demand, and application are closely linked, reinforcing its relevance within the global meetings landscape.

This is reflected in the range of international and regional association meetings hosted across Asia Pacific, from advanced technology and artificial intelligence to public health and medical science, engineering, environmental management, agriculture and food systems, and even specialised interest communities. These are interconnected areas where Asia Pacific's scale and development dynamics are actively shaping global dialogue, particularly around sustainability, resilience, and applied innovation. In Oceania, Australia and New Zealand further reinforce the landscape through established expertise in medical research, environmental science, and agricultural innovation, contributing applied expertise and long-standing research collaboration to the region's broader development.

Asia Pacific is also one of the most connected **aviation** regions globally, supported by extensive networks, expanding airline capacity, and continued investment in new airports and aviation infrastructure. This continued development creates appeal for associations, as attendee movement is at the top of their priority list when deciding on a meeting location.

At the same time, **investment in convention and exhibition infrastructure** is accelerating across both established and emerging destinations. Mature markets are expanding and modernising integrated event precincts, while newer destinations are developing purpose-built venues aligned with broader urban and economic strategies. Increasingly, these venues are positioned as integrated platforms linked to industry, trade, and city development, strengthening international positioning while reflecting local culture and community.

Growth in the region is built progressively over time. International and regional association meetings operate on long planning cycles, and outcomes reflect sustained engagement, trust-building, and strategic positioning. Even where results are not immediate, the process contributes to capability, visibility, and future opportunity.

MAKING THE CASE

Across **Asia Pacific**, destinations are strengthening their positioning through evidence-based advocacy closely aligned with national priorities. What distinguishes the region is as much the way the message is delivered as the message itself, particularly through the earlier and more active involvement of government and ministry stakeholders in complex, multi-layered economies.

In several markets, policymakers are engaged directly through international platforms and peer networks, including the ICCA Congress, creating exposure to global practices and enabling informed decision-making. This reflects a deliberate effort to bridge global insight with local policy and sector priorities, moving beyond treating meetings as standalone activities.

As a result, bidding in Asia Pacific increasingly operates within a coordinated framework across ministries, industries, and city or national stakeholders. In a region where markets differ widely in maturity and structure, this alignment is essential, positioning association meetings as part of broader strategies for sector development, international positioning, and long-term economic engagement.

The region's scale and economic weight, operating within a single interconnected system, reinforce this approach. As one of the world's most populous regions and a major driver of global growth, Asia Pacific brings together markets where demand is both immediate and evolving.

LEGACY

In Asia Pacific, legacy is understood as a process of impact over time, rather than a one-time outcome. The region's diversity operates at scale, where meetings bring together markets at different stages of development within a shared setting, allowing advanced research, emerging practice, and policy needs to intersect in real time. In this context, association conferences serve to exchange knowledge, accelerate adoption, build capability, and connect sectors that must evolve together.

This impact extends beyond mainstream professional sectors. Associations within cultural, artistic, heritage, sport and specialised-interest communities all play a role in sustaining knowledge, identity, and continuity across diverse societies. In a region characterised by rapid urbanisation and social change, these gatherings contribute to cultural relevance and community connection, alongside technical and sectoral advancement.

As a result, meetings in Asia Pacific function as points of convergence within a wider system, where global expertise meets local context, and where outcomes depend on how effectively knowledge is applied across markets. This is what defines legacy in the region: the ability to translate engagement into practical progress over time across different layers of development.

LOOKING TO 2030

Asia Pacific's meetings landscape will continue to evolve alongside the region's broader economic and societal transformation. The direction is clear: meetings are becoming more closely integrated into how the region connects, innovates, and progresses.

There is increasing emphasis on human-centred and responsible meeting design, where sustainability, inclusivity, and wellbeing are embedded into the experience. At the same time, technology is enhancing how knowledge is shared, while reinforcing the continued importance of face-to-face interaction in building trust and collaboration.

Asia Pacific's defining strength in this context is its ability to operate across diverse markets and systems simultaneously, adapting to different needs while maintaining regional coherence. This adaptability is becoming a defining strength in a complex global environment.

As the region continues to invest and progress, one idea becomes increasingly relevant:

"Maturity is not about having all the answers; it is about being comfortable navigating uncertainty."

That defines Asia Pacific today: a region that is forward-looking, continuously progressing, and committed to creating opportunities through connection, capability, and shared growth.

EUROPE

Written by **Efi Koudeli**, Senior Regional Director Europe | **Gea van Beek**, Regional Manager Europe

TOP 5 BY COUNTRY

Rank	Country / Territory
1	Italy
2	Germany
3	Spain
4	United Kingdom
5	France

TOP 5 BY CITY

Rank	City, Country / Territory
1	Lisbon, Portugal
2	Paris, France
3	Barcelona, Spain
4	Vienna, Austria
5	Prague, Czech Republic

**For complete regional ranking, please visit the static report section on page 92.*

SEE FULL RANKING

Europe's leadership is reinforced by strong national ecosystems across the region. The data highlights depth across multiple cities, evidence of a diversified, resilient European meetings landscape.

The 2025 rankings highlight a dual trend in Europe. Top-tier cities like **Lisbon, Paris, Copenhagen,** and **Berlin** continue to consolidate their leadership, while second-tier and emerging destinations, **Vilnius, Reykjavik,** and **Porto**, to name a few, are gaining ground more rapidly, with sharper upward movements.

This reinforces Europe's multi-city competitiveness model, where growth is more broadly distributed beyond capital cities, while scale and consistency continue to differentiate the top performers. **Berlin** stands out as one of the strongest performers, climbing significantly in the rankings and re-establishing itself as a leading European hub for international association meetings.

Istanbul continues its positive trajectory, with a steady rise that reinforces its role as a key gateway destination and primary driver of Turkey's overall performance.

REGIONAL LANDSCAPE

Europe's strength extends well beyond one or two capitals. Cities such as **Porto, Valencia, and Poznan** show how broad the European meetings ecosystem has become. **Italy** remains the clearest example of sustained, policy-aligned growth, leading Europe through coordinated national strategy and multi-city depth. **Spain** combines scale with breadth, with cities beyond **Barcelona** and **Madrid** reinforcing its position among the world's top countries. **Portugal** stands out as one of the most compelling growth stories: **Lisbon's** global strength is complemented by **Porto's** continued rise, demonstrating how second-tier cities can actively drive national performance.

Beyond the headline, structural developments signal long-term confidence. **Sweden's** national collaboration model is instructive: without a national Convention Bureau, 28 convention bureaus are united through the Swedish Network of Convention Bureaus (SNCVB), which provides a common platform for collaborating on industry-wide issues, exchanging knowledge, and supporting business development. In **Finland, Helsinki** has been named European Brain Health Capital by the European Academy of Neurology. **Leuven** has been crowned European Capital of Culture for 2030, putting this Flemish university town on the map.

MAKING THE CASE

The strongest advocacy in **Europe** is advancing from tourism language into economic development, research, and talent. National and city stakeholders are increasingly positioning international meetings as policy-aligned tools. **Italy** provides the flagship model, as over the past decade it moved from 550 meetings in 2019 to the top of Europe. **Spain's** convention-city network shows how coordination can scale shared tools, including legacy and impact measurement, to speak in terms that decision makers recognise. **Portugal's** coordinated national performance reinforces the same message.

The **UK** government is actively promoting regional destinations beyond **London** to distribute economic benefits and reduce congestion in popular cities.

LEGACY

The clearest European pattern is where meetings convert into structured networks: ambassador programmes, university–city collaborations, and repeat congress pipelines that strengthen bid capacity and sector ecosystems.

Porto, hosting the ICCA Congress 2025, demonstrated how a secondary city can deliver a high-impact, future-facing event model while strengthening national positioning. In Italy, structured ambassador programmes and bid pipelines create durable outcomes: repeat events, research links, and sector partnerships beyond delegate spend. Bologna's university and city collaboration is a strong example of this model in practice. In Türkiye, sector-led convenings and Istanbul's growing medical-scientific positioning show how meetings strengthen reputation, networks, and long-term competitiveness.

LOOKING TO 2030

By 2030, the continued rise of secondary cities, stronger alignment with sectoral and scientific ecosystems, and a move towards more focused, impact-driven events will shape Europe's meetings landscape.

To fully realise this potential, further alignment between policy, investment, and industry positioning will be essential. The destinations that will lead are those that use meetings to build ecosystems of innovation, knowledge, and lasting impact.

MIDDLE EAST

Written by **Anju Gomes**, Senior Regional Director Middle East

TOP 6 BY COUNTRY

Rank	Country / Territory
1	United Arab Emirates
2	Saudi Arabia
3	Qatar
4	Oman
5	Jordan
6	Bahrain

TOP 5 BY CITY

Rank	City, Country / Territory
1	Dubai, United Arab Emirates
2	Abu Dhabi, United Arab Emirates
3	Doha, Qatar
4	Muscat, Oman
5	Amman, Jordan
5	Riyadh, Saudi Arabia

**For complete regional ranking, please visit the static report section on page 112.*

SEE FULL RANKING

In 2025, the **Middle East** hosted **242 association meetings**, reflecting steady growth and a strong focus on capacity building throughout the region. While **Dubai** and **Abu Dhabi** compete confidently at the international level, across the region, more destinations are updating their infrastructure and building market knowledge, ready to enter that competition.

REGIONAL LANDSCAPE

United Arab Emirates remains the clear regional leader with **144** meetings, accounting for more than half of the total. Saudi Arabia maintained a stable performance with **30** meetings following. **Kuwait** demonstrated positive momentum, increasing the number of meetings from **4** to **8**, highlighting emerging potential within the regional meetings market.

The biggest story in the region in 2025 is that **Dubai** recorded **88** international association meetings, its highest ever, climbing from **37th** to **24th** in the global ranking.

Dubai's success has created an amplified effect across the region, with growth visible in other cities and growing interest from international associations exploring the region for future hosting.

The Middle East continued to lead globally in average participants per meeting, with **532** attendees per event. The region also hosted landmark global gatherings, including the ICOM General Conference in Dubai, which welcomed **4,500** delegates, and the 19th World Congress of Neurosurgery, bringing together **4,000** neurosurgeons from around the world.

In 2025, **Dubai** secured **504** successful bids, representing a 15% year-on-year increase in events won. A total of **747** bids were submitted during the year, up from **669** in 2024 an **11% increase** in bidding activity.

MAKING THE CASE

Destinations in the **Middle East** continue to highlight the strategic value of international meetings beyond tourism, emphasising their long-term contribution to economic impact, talent development, and innovation. The ICCA Business Events Trends Report is now scheduled for release in August at the Arabian Travel Market (ATM). The report will underscore the measurable economic contributions of meetings across the region, including support for local businesses, workforce development, and knowledge exchange.

This momentum aligns with a number of significant projects and initiatives across the Middle East in the coming years that are shaping demand for international business events. These include large-scale urban and cultural developments such as NEOM and Diriyah Gate in Saudi Arabia, the continued evolution of District 2020 and Expo City Dubai, major transport and infrastructure investments such as Etihad Rail, and the expansion of world-class convention, exhibition, and cultural districts across the Gulf.

LEGACY

Aligned with the region's focus on developing local talent, ICCA is helping build a skilled, accredited workforce for the business events industry. Through initiatives such as ICCASkills, emerging professionals gain early exposure to international association meetings, industry standards, and global best practices, creating clearer entry pathways into the sector. In parallel, accredited programmes like the ICCA CICS and CICE, delivered with national institutions and destination partners, are raising professional standards and expanding long-term capability. Together, these efforts position association meetings as drivers of workforce development, professionalisation, and sustainable industry growth across the Middle East.

LOOKING TO 2030

Looking ahead to 2030, the Middle East's meetings market will be driven by major infrastructure investment and a growing base of locally trained, accredited professionals. New convention centres, smart venues, and improved regional connectivity are strengthening the region's capacity to host large-scale international association meetings. Association meetings alone are projected to generate US\$427 million by 2030, with the broader economic impact between 2015 and 2019 and 2023 and 2030 estimated at US\$2.7 billion. Realising this potential will require sustained policy support, continued investment in sustainability and technology, and a shift toward viewing meetings as long-term drivers of economic and social impact.

LOOK FORWARD

The numbers in this report tell the story of where we are. The data on the pages ahead tells us where we are going and what must happen to get there.

THE ROAD TO 2030

By 2030, the ICCA forecast projects **15,000+** international and regional association meetings annually, welcoming close to **6.7 million** participants and generating an estimated **USD 18.54 billion** in delegate expenditure.

1. Growth in meetings is strong and accelerating.

Event counts are forecast to increase by roughly 23% over the next five years, signaling international association meetings sector is gaining momentum.

2. Attendance is growing even faster.

The participant forecast outpaces the event count, rising 33 per cent between 2025 and 2030. Meetings, on average, are getting larger. The race for high-attendance congresses will intensify. The destinations and venues already investing in infrastructure, ambassadors, and sectoral positioning will be best placed to benefit.

3. Economic value is growing fastest of all.

Estimated delegate expenditure is forecast to rise 37 per cent by 2030. It reflects the increasing premium that associations and delegates place on the quality of the destination, the programme, and the experience.

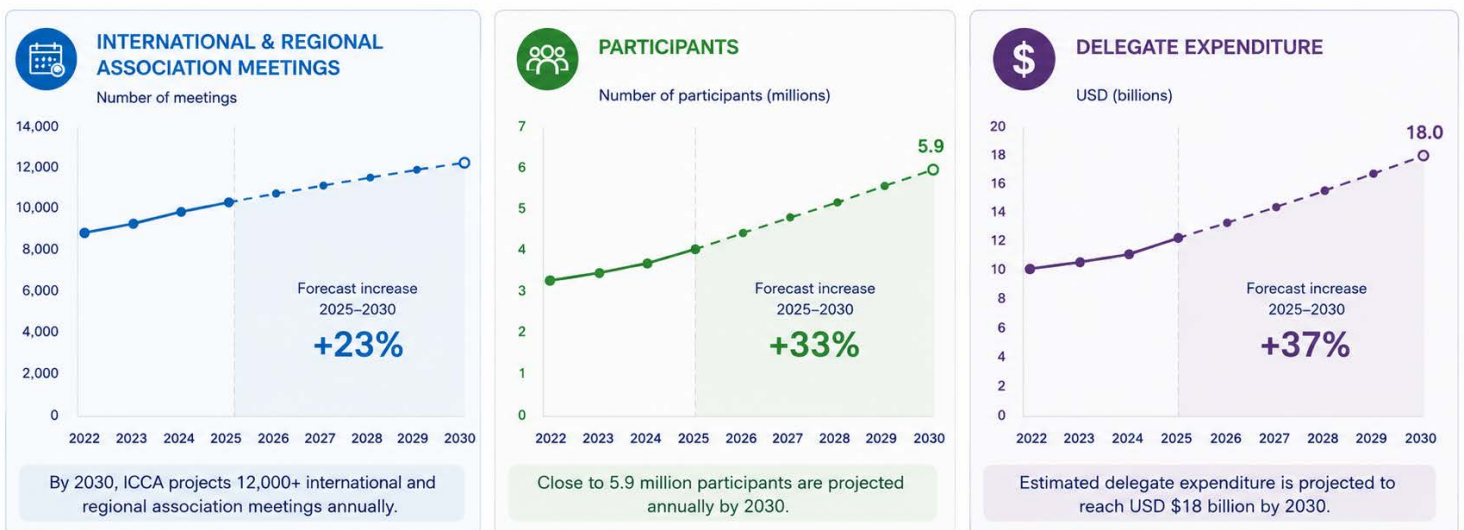

Figure 21: Forecast 2030

The trajectory is positive. But the forecast is not guaranteed. Geopolitical tensions, visa restrictions, extreme weather events, and the ongoing disruption of digital alternatives remain genuine headwinds. The destinations, venues, and meeting partners that will capture 2030's growth are those who act with intention today.

A Shared Mandate: Calls to Action for Our Industry

The 2025 GlobeWatch Report is a mirror and a map. The mirror shows where international association meetings stand today. The map points to where opportunity lies.

Destinations

The data is consistent across every region: the destinations that lead do not lead by accident. Italy's rise was built on a national ambassador programme. Singapore's climb to the global top was decades in the making.

What should the focus be? Build a portfolio strategy anchored in your city's knowledge strengths, research institutions and innovation ecosystems. Identify your sector sweet spot and go deep. Invest in your ambassador pipeline before you need it. And above all, tell an economic story about internationalisation, talent development, and long-term sector growth that your government actually needs to hear.

The next generation of competitive advantage will be built on deeper alignment between destination strategy, national policy, and global association relationships, not on a larger convention centre alone.

Venues

The convention centre has never been just a building. It is an act of city strategy, a signal of ambition, a commitment, and a platform for the meetings that shape industries.

Venues are expected to activate communities, build legacies, demonstrate sustainability, and serve as genuine partners in the knowledge work within their walls.

What should the focus be? Lead the legacy conversation, not just the logistics. Invest in technology infrastructure, build a present competitive differentiator.

The venue that wins in 2030 will be the one that best understands what an association is trying to achieve and builds the entire experience around that purpose.

Meetings and Events Management

Professional congress organisers sit at the intersection of everything this report describes: destination capability, association need, delegate experience, and the complex logistics of bringing the world's knowledge communities together. In a sector facing disruption from AI-driven tools, shifting association budgets, and evolving delegate expectations, the role of the PCO is becoming more strategic.

What should the focus be? Evolve your value proposition from logistical excellence to strategic partnership. Use your cross-portfolio knowledge of what associations are asking for and what destinations are building as a genuine intelligence service. Invest in your own capability in data, sustainability, and digital experience design. The PCOs who thrive to 2030 will be those moving from 'how do we organise this congress?' to 'why does this congress matter, and how do we make that matter more?'

Meetings and Events Solutions

Technology, audiovisual, translation, catering, and transport, the suppliers and solutions providers who make every congress function are its daily delivery mechanism.

AI-assisted translation, hybrid broadcast production, real-time data analytics, and sustainable procurement are shifting from premium differentiators to baseline expectations. Associations and PCOs are selecting partners on price and reliability alongside alignment with sustainability commitments, accessibility goals, and their vision of what a great congress experience looks like.

What should the focus be? Position innovation as a partnership, not a product catalogue. Come to the table with solutions built around the association's goals, not just the meeting's logistical needs. Lead on sustainability with measurable commitments that clients can report on, not pledges. And invest in the talent that can translate technical capability into human experience: the next generation of meeting solutions professionals will be as comfortable with impact measurement as they are with production schedules.

Associations

You are the reason this industry exists.

The choices associations make, where to meet, how often, in what format, with which partners, and to what end, shape the entire ecosystem described in this report. When an association chooses a city, it signals to that community that its knowledge matters. When it invests in a legacy programme, it sends research into the world beyond the conference room. When it brings its congress to emerging destinations, it signals a vote of confidence in where it might become.

What should the focus be? Own the impact of your congress as a strategic asset, not an organisational expense. Articulate what your meeting contributes to the world and demand that your destination and venue partners help you deliver it. Explore the markets and communities that could benefit most from access to your knowledge. And engage ICCA's global network not just as a logistical resource but as a strategic partner in understanding where your next meeting can have the greatest impact.

BUILDING THE WORKFORCE THAT COMES NEXT

The business events industry faces a talent challenge that is more complex than a post-pandemic shortfall. It is a structural challenge of identity, perception, and pipeline. Too few young professionals enter this field knowing what it actually is. Too few who enter it stay long enough to become the next generation of senior leaders. And the skills the industry will need in 2030 are not entirely the skills it has been recruiting for.

ICCA believes this requires a new conversation about attracting new talent and how this industry presents itself to the world and to the next generation.

A Different Story for a Different Generation

The business events industry has long recruited on passion. The promise has been: you will travel the world, meet extraordinary people, and work on events that create wow factors. That promise is still true, but it is no longer sufficient.

The next generation of professionals is asking different questions before they choose a career: What impact will my work have? Does it connect to the challenges I care about? Can I build skills here that are valuable anywhere? And the business events industry, if it is honest about what it does, has powerful answers to all of them.

International association meetings are where the world's leading researchers convene to advance science. They are where policymakers, engineers, and academics gather to address climate change, food security, and global health. They are where the next generation of professionals in every field builds the global relationships that will define their careers. The people who organise, host, and support those meetings are the designers of the global knowledge exchange.

The message should be: **come work at the intersection of science, diplomacy, and economic development. Build the places where the world's most important conversations happen.**

ICCA calls on all members, destinations, venues, PCOs, and technology providers to actively participate in telling this updated value proposition. The next generation of talent will not find us if we are invisible to them.

CLOSING: THE INDUSTRY THAT SHAPES WHAT COMES NEXT

The data in this report confirms that international association meetings are growing. The economic value they generate is rising. The communities they connect are expanding. The regions participating in global knowledge exchange are broadening.

Every data point in the 2025 ICCA GlobeWatch represents a decision made by a city to invest, by a venue to build, by an association to meet, by a professional to make it happen. The trajectory is positive because thousands of deliberate choices made it so.

The work ahead is harder, and the stakes are higher. Geopolitical uncertainty is not easing. Climate disruption will continue to challenge how and where we meet. Artificial intelligence will reshape the value chain of every profession in this industry. The competition for the most impactful congresses will intensify as more destinations develop the infrastructure and expertise to compete.

The data makes one thing clear: the world does not stop needing to gather. In every era of disruption, every period of uncertainty, the human need to convene remains.

The industry that makes those gatherings possible is an industry the world cannot afford to underestimate.

This is the moment for ambition. The forecast is positive, but the opportunity demands urgency: to redefine what this industry is, to attract the talent it deserves, and to demonstrate to associations, governments, and the communities that host these gatherings that this is not discretionary spend. They are how the world, despite everything, continues to advance together.

The 2025 ICCA GlobeWatch shows where the world met last year. The choices made by every member of this community, starting today, will determine where the world meets next.

METHODOLOGY

ICCA Business Intelligence (BI) is built on a powerful database containing decades of in-depth information and analysis of the international associations industry. The database provides members with useable, relevant data about business opportunities and event partners.

The annual ICCA Rankings Report contains aggregated association meetings data from ICCA's Business Intelligence database. Association meetings are only included if they:

- Take place on a regular basis
- Rotate within a minimum of three countries/territories
- Have at least 50 onsite participants
- Adhere to meeting inclusion guidelines as set by the ICCA Research Department

DATA COLLECTION

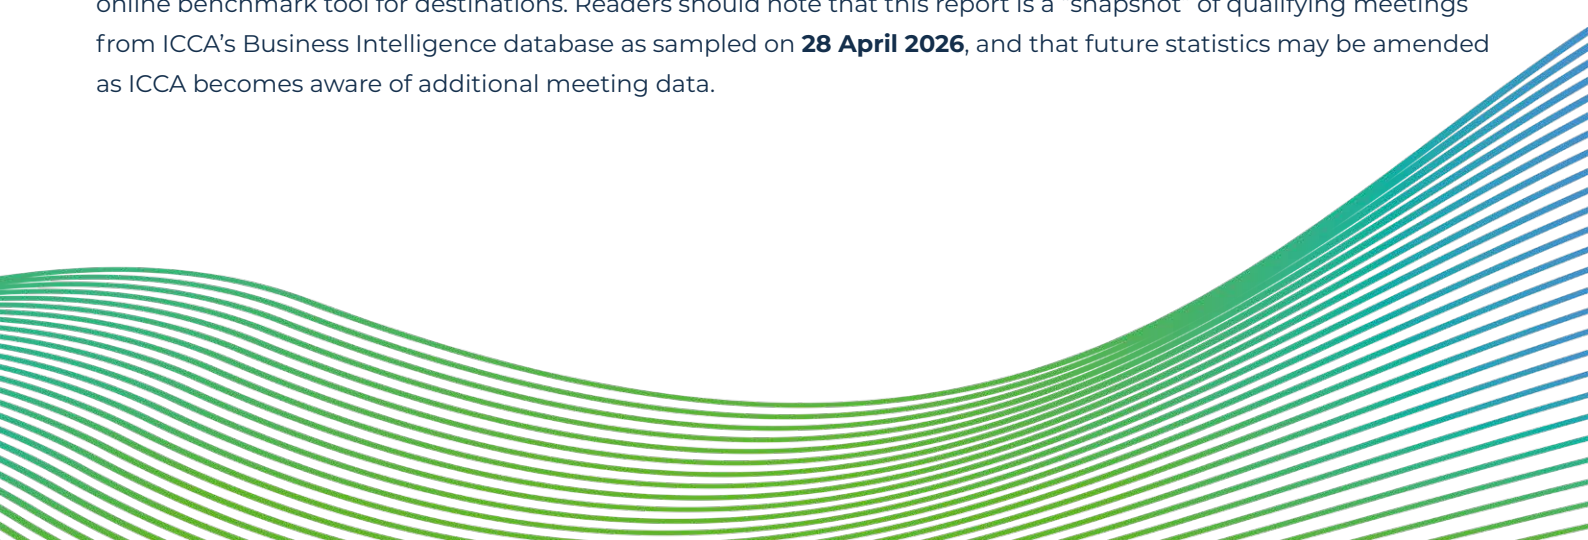

Data for the ICCA Business Intelligence database is collected and verified throughout the year:

- Specific research projects on individual market segments and geographical locations by the ICCA Research Department
- Updates from the ICCA Association Community
- Updates from Associations attending ICCA events
- Past and future calendar bookings from ICCA Members
- Online updates by ICCA members using the feedback function

For the ICCA Ranking Report, ICCA's Research Department sends a call to all its members to submit meeting data for their destination for that particular year. The deadline is 1 February of the following year. Meeting data is processed within approximately three months. Data submitted must be substantiated with adequate proofs of rotation and attendance. The ICCA Research Department verifies these proofs to ensure its accuracy and validity.

SNAPSHOT

After the data has been processed, an annual snapshot is generated. Based on this snapshot, the static annual statistics report is created and published within a month, alongside ICCA's Business Analytics (BA), which is an online benchmark tool for destinations. Readers should note that this report is a "snapshot" of qualifying meetings from ICCA's Business Intelligence database as sampled on **28 April 2026**, and that future statistics may be amended as ICCA becomes aware of additional meeting data.

PARTICIPANT NUMBERS

If a meeting for a specific year does not have a participant number, an estimated average participant number will be used instead, based on known historical participant numbers for that meeting.

EXPENDITURE FACTOR

To calculate the estimated total expenditure, ICCA applies an Expenditure Factor, which is set at 0.22 (or 22%). This number was established based on two historical expenditure studies performed by Vienna CVB and Finland CVB. The results of these studies showed that approximately 22% of the total expenditure of one delegate was spent on the registration fee. The other 78% of the total expenditure was spent on travel, accommodation, gastronomy, public transport, culture/leisure, shopping, and telecommunication.

In 2019, ICCA performed a similar expenditure study during its annual international congress in Houston. This study showed that 25% of the total expenditure per delegate was spent on the registration fee. As this percentage is close to 22%, we decided to maintain 22% for future reports as well. ICCA plans to do periodic corroborative expenditure studies during its congress to ensure the reliability of the Expenditure Factor to ensure reliable Expenditure Factor.

CALCULATING THE ESTIMATED TOTAL EXPENDITURE FOR 2025

Where possible, ICCA's Research Department estimates total delegate expenditure per meeting using the registration fee collected for each event. As registration fees typically represent 22% of total delegate spend, the total expenditure is calculated by dividing the registration fee by 0.22.

To get the estimated total expenditure per meeting (i.e. for one whole meeting), we multiply it by the total number of delegates for that meeting.

For 2025, ICCA has identified 12438 meetings in total, with an average registration fee of USD596 and an average delegate number of 403.

To calculate the estimated total expenditure for all 2025 meetings, we apply the following formula:

$$\text{Avg. Registration Fee all meetings}/0.22) \times \text{Avg. \#delegates all meetings} \times \text{Total \#meetings} = \\ (596/0.22) \times 403 \times 12438 = 13.6B \text{ USD}$$

Note: all registration fees in ICCA statistical reports are converted to US Dollars.
