ABSTRACT

A DiskLink system is provided in the present disclosure. The DiskLink system is established on a cloud-based network, and is formed by cloud-based disks connecting to each other in a way similar to that of a neural network system. The DiskLink system includes information webpages that each display virtual reality scenes. When any movement option of one information webpage is selected, an information webpage program of the information webpage stores a movement record data in a browser. When each of the information webpages is executed, the information webpage program loads the movement record data from the browser and displays a previous webpage option. When the previous webpage option is selected, the browser displays a previous webpage address in the previous webpage option, and the information webpage program uses the movement record data to simulate a user selecting the movement options to change the virtual reality scenes.

To Promote the Progress

of Science and Useful Arts

The Director

*of the United States Patent and Trademark Office has received
an application for a patent for a new and useful invention. The title
and description of the invention are enclosed. The requirements
of law have been complied with, and it has been determined that
a patent on the invention shall be granted under the law.*

Therefore, this United States

Patent

grants to the person(s) having title to this patent the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States of America or importing the invention into the United States of America, and if the invention is a process, of the right to exclude others from using, offering for sale or selling throughout the United States of America, products made by that process, for the term set forth in 35 U.S.C. 154(a)(2) or (c)(1), subject to the payment of maintenance fees as provided by 35 U.S.C. 41(b). See the Maintenance Fee Notice on the inside of the cover.
